

B. Tech.
IN
CHEMICAL ENGINEERING

FLEXIBLE CURRICULUM
(2019-2020 Batch)

DEPARTMENT OF CHEMICAL ENGINEERING
NATIONAL INSTITUTE OF TECHNOLOGY
TIRUCHIRAPPALLI – 620 015
TAMIL NADU, INDIA

Vision of the Department

To be a global leader in Chemical Engineering

Mission of the Department

- (i) To produce competent graduates through effective Teaching-Learning, State of the art Research and Innovation.
- (ii) To foster community by providing leadership in solving societal problems for sustainable eco system.
- (iii) To serve organization and society as adaptable engineers, entrepreneurs or leaders.

Programme Educational Objectives (PEOs)

After 4 years of graduation, our graduates will:

- Choose their careers as practicing chemical engineers in traditional chemical industries as well as in expanding areas of materials, environmental and energy-related industries.
- Engage in post-baccalaureate study and are making timely progress toward an advanced degree in chemical engineering or a related technical discipline or business.
- Function effectively in the complex modern work environment with the ability to assume professional leadership roles.

Programme Outcomes (POs) : Chemical Engineering

- (1) The Chemical Engineering graduates are capable to apply knowledge of mathematics, science and engineering.
- (2) The Chemical Engineering graduates are capable to design and conduct experiments, as well as to analyze and interpret data.
- (3) The Chemical Engineering graduates are capable to design a system, a component, or a process to meet desired needs within realistic constraints such as economic, environmental, social, ethical, health and safety, manufacturability, and sustainability.
- (4) The Chemical Engineering graduates are capable to function on multi-disciplinary teams.
- (5) The Chemical Engineering graduates are capable to identify, formulate and solve engineering problems.
- (6) The Chemical Engineering graduates have the understanding of professional and ethical responsibility.
- (7) The Chemical Engineering graduates are capable to communicate effectively.
- (8) The Chemical Engineering graduates have the broad education necessary to understand the impact of engineering solutions in a global, economic and societal context.
- (9) The Chemical Engineering graduates are capable to engage themselves in life-long learning.
- (10) The Chemical Engineering graduates have knowledge of contemporary /current issues.
- (11) The Chemical Engineering graduates are capable to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- (12) Chemical engineering graduates are capable to apply fundamental and practical knowledge of unit operations and processes, principles of management and economics for providing better services to chemical process industries.

CURRICULUM

The total minimum credits for completing the B.Tech. programme in **Chemical Engineering** is 163 (160±3).

MINIMUM CREDIT REQUIREMENT FOR THE VARIOUS COURSE CATEGORIES

The structure of B.Tech. programmes shall have General Institute Requirements (GIR), Programme Core (PC), Elective Courses (PE, OE and MI) and Essential Programme Laboratory Requirements (ELR) are as follows:

Sl.No.	COURSE CATEGORY	Number of Courses	Number of Credits
1.	General Institute Requirement (GIR)	22	56
2.	Programme Core (PC)	15	49
3.	Essential Programme Laboratory Requirement (ELR)	2 per session	16
4.	Elective courses a. Programme Electives (PE) b. Open Electives (OE) **The students should study at least eight programme elective courses (PE)	14	42
Total			163
5.	Minor Course (Optional)	Courses for 15 credits	15
6.	Honours Course (Optional)	Courses for 15 credits	15
TOTAL			193

(I) GENERAL INSTITUTE REQUIREMENTS

Sl. No.	Name of the course	Number of courses	Max. Credits
1.	Mathematics	3	10
2.	Physics	1 Theory	3
		1 Lab	2
3.	Chemistry	1 Theory	3
		1 Lab	2
4.	Industrial Economics and Foreign Trade	1	3
5.	English for Communication	1 Theory	2
		1 Lab	2
6.	Energy and Environmental Engineering	1	2
7.	Professional Ethics	1	3
8.	Engineering Graphics	1	3
9.	Engineering Practice	1	2
10.	Basic Engineering	2	4
11.	Introduction to computer Programming	1	3
12.	Branch Specific Course (Introduction to the Branch of study)	1	2
13.	Summer Internship	1	2
14.	Project work	--	--
15.	Comprehensive viva	1	1
16.	Industrial Lecture	1	1
17.	NSS/NCC/NSO	1	Compulsory participation
Total		22	50

I. GENERAL INSTITUTE REQUIREMENTS**1. MATHEMATICS**

Sl.No.	Course Code	Course Title	Credits
1.	MAIR11	Mathematics I	3
2.	MAIR21	Mathematics II	3
3.	MAIR41	Mathematics III	4
Total			10

2. PHYSICS

Sl.No.	Course Code	Course Title	Credits
1.	PHIR11	Physics I (Theory)	3
2.	PHIR12	Physics II (Lab)	2
Total			5

3. CHEMISTRY

Sl.No.	Course Code	Course Title	Credits
1.	CHIR11	Chemistry I (Theory)	3
2.	CHIR12	Chemistry II (Lab)	2
Total			5

4. COMMUNICATION

Sl.No.	Course Code	Course Title	Credits
1.	HSIR11	English for Communication (Theory)	2
		English for Communication Lab	2
Total			4

5. PROFESSIONAL ETHICS

Sl.No.	Course Code	Course Title	Credits
1.	HSIR14	Professional Ethics	3
Total			3

6. ENERGY AND ENVIRONMENTAL ENGINEERING

Sl.No.	Course Code	Course Title	Credits
1.	ENIR11	Energy and Environmental Engineering	2
Total			2

7. HUMANITIES

Sl.No.	Course Code	Course Title	Credits
1.	HSIR13	Industrial Economics & Foreign Trade	3
Total			3

8. ENGINEERING GRAPHICS

Sl.No.	Course Code	Course Title	Credits
1.	MEIR12	Engineering Graphics	3
Total			3

9. ENGINEERING PRACTICE

Sl.No.	Course Code	Course Title	Credits
1.	PRIR11	Engineering Practice	2
Total			2

10. BASIC ENGINEERING

Sl.No.	Course Code	Course Title	Credits
1.	CEIR11	Basics of Civil Engineering	2
2.	EEIR11	Basics of Electrical and Electronics Engineering	2
Total			4

11. INTRODUCTION TO COMPUTER PROGRAMMING

Sl.No.	Course Code	Course Title	Credits
1.	CSIR12	Introduction to Computer Programming	3
Total			3

12. BRANCH SPECIFIC COURSE

Sl.No.	Course Code	Course Title	Credits
1.	CLIR15	Introduction to Chemical Engineering	2
Total			2

13. INDUSTRIAL LECTURE

Sl.No.	Course Code	Course Title	Credits
1.	CLIR16	Industrial Lectures	1
Total			1

A course based on industrial lectures shall be offered for 1 credit. A minimum of five lectures of two hours duration by industry experts will be arranged by the Department. The evaluation methodology, will in general, be based on quizzes at the end of each lecture.

14. SUMMER INTERNSHIP

Sl.No.	Course Code	Course Title	Credits
1.	CLIR17	INTERNSHIP / INDUSTRIAL TRAINING / ACADEMIC ATTACHMENT (2 to 3 months duration during summer vacation) [#]	2
Total			2

The student should undergo industrial training/internship for a minimum period of two months during the summer vacation of 3rd year. Attachment with an academic institution within the country (IISc/IITs/NITs/IITs and CFTIs) or university abroad is also permitted instead of industrial training.

[#] To be evaluated at the beginning of VII semester by assessing the report and seminar presentations.

15. COMPREHENSIVE VIVA

Sl.No.	Course Code	Course Title	Credits
1.	CLIR18	Comprehensive Viva-Voce	1
Total			1

16. PROJECT WORK

Sl.No.	Course Code	Course Title	Credits
1.	CLIR19	Project Work	6
Total			6

17. NSS/NCC/NSO

Sl.No.	Course Code	Course Title	Credits
1.	SWIR11	NSS/NCC/NSO	0
Total			0

(II) PROGRAMME CORE (PC)

Sl.No.	Course Code	Course Title	Prerequisites	Credits
1.	CLPC11	Chemistry III	NONE	3
2.	CLPC12	Process Calculations	NONE	3
3.	CLPC13	Momentum Transfer	NONE	3
4.	CLPC14	Chemical Engineering Thermodynamics	CLPC11	4
5.	CLPC15	Chemical Technology	NONE	3
6.	CLPC16	Heat Transfer	CLPC13	3
7.	CLPC17	Particulate Science and Technology	NONE	3
8.	CLPC18	Mass Transfer - I	CLPC11, CLPC14	3
9.	CLPC19	Transport Phenomena	CLPC13,CLPC16, CLPC18	3
10.	CLPC20	Mass Transfer - II	CLPC18	4
11.	CLPC21	Chemical Reaction Engineering	CLPC14,CLPC16	3
12.	CLPC22	Chemical Process Equipment Design	CLPC13, CLPC16 CLPC18,CLPC20	4
13.	CLPC23	Process Modeling and Simulation	CLPC13, CLPC16 CLPC18,CLPC20	3
14.	CLPC24	Process Dynamics and Control	MAIR21	4
15.	CLPC25	Project Engineering and Economics	CLPC17	3
Total				49

(III) ESSENTIAL PROGRAMME LABORATORY REQUIREMENTS (ELR)

Sl.No.	Course Code	Course Title	Co requisites	Credits
1.	CLLR11	Momentum Transfer Lab	CLPC13	2
2.	CLLR12	Instrumental Analysis and Thermodynamics Lab	CLPC14	2
3.	CLLR13	Particulate Science & Technology Lab	CLPC17	2
4.	CLLR14	Heat Transfer Lab	CLPC16	2
5.	CLLR15	Mass Transfer Lab	CLPC18, CLPC20	2
6.	CLLR16	Chemical Reaction Engineering Lab	CLPC21	2
7.	CLLR17	Process Dynamics and Control Lab	CLPC24	2
8.	CLLR18	Process Modeling Simulation Lab	CLPC23	2
Total				16

NOTE: Students can register for 2 laboratory courses during one session along with regular courses (PC / PE / OE / MI).

(IV) PROGRAMME ELECTIVES (PE)

Sl.No.	Course Code	Course Title	Prerequisites	Credits
1.	CLPE11	Petroleum and Petrochemical Engineering	NONE	3
2.	CLPE12	Computer Applications in Chemical Engineering	NONE	3
3.	CLPE13	Polymer Science and Technology	NONE	3
4.	CLPE14	Modern Separation Processes	CLPC18, CLPC20	3
5.	CLPE15	Safety in Chemical Process Industries	CLPC17	3
6.	CLPE16	Material Science & Technology	NONE	3
7.	CLPE17	Industrial Process Biotechnology	NONE	3
8.	CLPE18	Fluidization Engineering	CLPC13, CLPC17	3
9.	CLPE19	Pharmaceutical Technology	NONE	3
10.	CLPE20	Process Intensification	CLPC16, CLPC18, CLPC21	3
11.	CLPE21	Electro-chemical Reaction Engineering	NONE	3
12.	CLPE22	Food Processing Technology	NONE	3
13.	CLPE23	Biorefinery Engineering	NONE	3
14.	CLPE24	Water Treatment Technology	NONE	3
15.	CLPE25	Biochemical Engineering	NONE	3
16.	CLPE26	Air Pollution Control Engineering	NONE	3
17.	CLPE27	Industrial Wastewater Treatment	NONE	3
18.	CLPE28	Fuel Cells and Batteries	NONE	3
19.	CLPE29	Heterogeneous Chemical Reaction Engineering	CLPC21	3

(V) OPEN ELECTIVES (OE)

Sl.No.	Course Code	Course Title	Prerequisites	Credits
1.	CLOE11	Environmental Engineering	NONE	3
2.	CLOE12	Optimization Techniques	NONE	3
3.	CLOE13	Energy Engineering	NONE	3
4.	CLOE14	Process Instrumentation	NONE	3
5.	CLOE15	Nano Technology	NONE	3
6.	CLOE16	Bioenergy	NONE	3
7.	CLOE17	Design and Analysis of Experiments	NONE	3
8.	CLOE18	Introduction to Data Analysis	NONE	3
9.	CLOE19	Soft Computing Techniques	NONE	3

ONLINE COURSES – Open Electives				
Course offered by NPTEL/SWAYAM/MOOC				
Sl.No.	Course Code	Course Title	Prerequisites	Credits
1	CLOE51	BioInformatics:Algorithms and Applications	NONE	3
2	CLOE 52	Introduction to Machine Learning	NONE	3
3	CLOE 53	System Identification	NONE	3
4	CLOE 54	Computer Aided Drug Design	NONE	3
Course offered by NPTEL/SWAYAM/MOOC * The students should register online courses after obtaining prior approval from the competent authorities. The BoS recommended absolute grading policy for online courses.				

(VI) MINORS (MI)

Students who have registered for B.Tech. Minor in Chemical Engineering

[Note: Number of Minor courses: 5 courses (Minimum)]

Sl.No.	Course Code	Course Title	Prerequisites	Credits
1.	CLMI 11	Chemical Process Calculations	NONE	3
2.	CLMI 12	Transfer Operations – I	NONE	3
3.	CLMI 13	Transfer Operations – II	CLMI12	3
4.	CLMI 14	Chemical Reaction Engineering	CLMI 11, CLMI 13	3
5.	CLMI 15	Chemical Technology	NONE	3
Total				15

VII. HONOURS

A student can obtain B.Tech. (Honours) degree provided the student has to

- i. Register at least for 12 theory courses and 2 ELRs in the second year.
- ii. Consistently obtain a minimum GPA of 8.5 in the first four sessions and continue to maintain the same GPA of 8.5 in the subsequent sessions (including the Honours courses)
- iii. Complete 3 additional theory courses specified for the Honors degree of the programme.
- iv. Complete all the courses registered, in the first attempt and in four years of study.

Sl.No.	Course Code	Course Title	Co requisites	Credits
1.	CLHO11	Advanced Process control	CLPC24	3
2.	CLHO12	Pinch Analysis and Heat Exchange Network Design	CLPC14, CLPC16	3

3.	CLHO13	Applied Mathematics in Chemical Engineering	CLPC16, CLPC18, CLPC21	3
4.	CLHO14	Advances in Heat Transfer	CLPC16	3
5.	CLHO15	Computational Fluid Dynamics	CLPC13	3
6.	CLHO16	Process Safety Management	NONE	3

Course Code	:	CLPC11
Course Title	:	CHEMISTRY-III
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To learn the principles of photochemical and pericyclic reactions in order to apply them in organic synthesis.
2. To acquire knowledge on the advanced characterization techniques in identification of compounds.
3. To learn about the industrially relevant catalytic processes, technologies for various chemical processes and preparation of fine chemicals.
4. To learn the applications of electrochemistry in energy and environmental studies

COURSE CONTENT

Photochemistry and Pericyclic Reactions: Fundamentals of photochemistry, Norrish type I and II reactions, photo reduction of ketones, photochemistry of arenes. Pericyclic reactions, classification, Woodward-Hoffmann rules and FMO theory.

Identification of organic compounds: Basics of IR spectroscopy, applications. Mass spectroscopy: Methods of desorption and ionization (EI, CI, MALDI, ESI), study of fragmentation pattern. Basic principles of ^1H and ^{13}C NMR, applications of ^1H and ^{13}C NMR (DEPT) to organic chemistry, case studies and combined problems.

Catalysis and Kinetics: Catalysis- Homogeneous & heterogeneous catalysis, Langmuir – Hinshelwood mechanism of a bimolecular surface reaction, Elay – Rideal mechanism of a surface reaction, enzyme catalysis and kinetics, self-assembled monolayers and Langmuir-Blodgett films-determination of surface area of catalysts.

Process development for fine chemicals: Preparation of acid chlorides from carboxylic acids, Friedel-Crafts acylation, Grignard reagents, Wittig reaction, ozonolysis, sharpless epoxidation. Hydroformylation, Wacker-smidt synthesis, Monsanto acetic acid and carbonylation processes.

Electrochemistry Principles: Electrode processes, thermodynamics and potential, electron and mass transfer; electrochemical measurement methods and instruments; principles of electrochemical devices including batteries, super capacitors, fuel cells and electrochemical sensors.

COURSE OUTCOMES

At the end of the course, student will be able to

CO1	apply the concepts of photochemistry and catalysts in optimizing the conditions of organic synthesis.
CO2	use advanced spectroscopic tools in characterization of the reaction products to assess purity and yield.
CO3	determine the best reaction conditions to maximize the products by applying the principles of homogeneous and heterogeneous catalysis.
CO4	understand the concepts of electrochemistry principles and applications

CO4	✓	✓	✓		✓			✓			✓	✓

Course Code	:	CLPC12
Course Title	:	PROCESS CALCULATIONS
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To understand the fundamental knowledge in units and conversions and also the basic laws governing chemical operations.
2. To impart knowledgeable on material and energy balance with and without reactions.

COURSE CONTENT

Stoichiometry: Introduction - Units and Dimensions - Stoichiometric principles –composition relations, density and specific gravity.

Ideal Gases and Vapor Pressure: Behaviour of Ideal gases - kinetic theory of gases - application of ideal gas law - gaseous mixtures - volume changes with change in composition. Vapour pressure - effect of Temperature on vapour pressure - vapour pressure plots - vapour pressure of immiscible liquids - solutions.

Humidity and Solubility: Humidity - saturation - vaporization - condensation - wet and dry bulb thermometry Solubility and Crystallisation - Dissolution - solubility of gases.

Material Balance: Material Balance - Processes involving chemical reaction - Combustion of coal, fuel gases and sulphur - Recycling operations - bypassing streams - Degree of conversion – excess reactant - limiting reactant. Unsteady state problems

Energy Balance: Thermo chemistry - Hess's law of summation - heat of formation, reaction, combustion and mixing - mean specific heat - Theoretical flame Temperature

5. *Himmelblau, "Basic Principles and Calculations in Chemical Engineering", 8th Edn., Prentice Hall of India Ltd, India 2012.*

COURSE OUTCOMES

At the end of the course, student will have

CO1	the capability to convert units and dimensions and also modify equations from system to another.
CO2	the capability to apply the laws of physics and chemistry in solving process industry related applications.
CO3	the proficiency to integrate the data and formulate the mass and energy balance problems.
CO4	the capability to use mathematical knowledge for solving mass and energy balance problems with and without chemical reactions.

CO3	✓	✓	✓		✓			✓	✓		✓	✓
CO4	✓	✓	✓		✓			✓	✓		✓	✓

Course Code	:	CLPC13
Course Title	:	MOMENTUM TRANSFER
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To impart the fundamental concepts of fluid statics, pressure distribution and dimensional analysis
2. To nurture the students to solve fluid dynamics problems using Newton's laws of motion.
3. To enable students to compute velocity profile, friction factor and head loss in pipes and fittings
4. To impart the knowledge of metering and transportation of fluids and fluid moving machinery performance

COURSE CONTENT

Properties of fluids and concept of pressure: Introduction - Nature of fluids - physical properties of fluids - types of fluids. Fluid statics: Pressure - density - height relationships. Pressure Measurement. Units and Dimensions - Dimensional analysis. Similarity - forces arising out of physical similarity - dimensionless numbers.

Momentum Balance and their Applications: Kinematics of fluid flow: Stream line -stream tube - velocity potential. Newtonian and non-Newtonian fluids - Time dependent fluids - Reynolds number - experiment and significance - Momentum balance - Forces acting on stream tubes - Potential flow - Bernoulli's equation - Correction for fluid friction - Correction for pump work.

Flow of Incompressible Fluids Through Ducts: Flow of incompressible fluids in pipes - laminar and turbulent flow through closed conduits - velocity profile & friction factor for smooth and rough pipes - Head loss due to friction in pipes, fitting etc. Introduction to compressible flow. Isentropic flow through convergent and divergent nozzles and sonic velocity

Flow of Fluids through Solids: Form drag - skin drag - Drag co-efficient. Flow around solids and packed beds. Friction factor for packed beds. Ergun's Equation - Motion of particles through fluids - Motion under gravitational and centrifugal fields - Terminal settling velocity. Fluidisation - Mechanism, types, general properties – applications

Transportation and Metering: Measurement of fluid flow: Orifice meter, venturi meter, pitot tube, rotameter, weirs and notches Wet gas meter and dry gas meter. Hot wire and hot film anemometers. Transportation of fluids: Fluid moving machinery performance. Selection and specification. Air lift and diaphragm pump. Positive displacement pumps: Rotary and Reciprocating pumps. Centrifugal pumps and characteristics.

4. J. M. Coulson and J. F. Richardson, "Chemical Engineering", Vol 1, 6th Edn. Butterworth-Heinemann, 1999.

COURSE OUTCOMES

On completion of the course, the students would have

CO1	the knowledge of fundamental concepts in fluids statics and to use dimensional analysis for scaling experimental results.
CO2	the ability to solve hydrostatic and fluid flow problems using Newton's laws of motion.
CO3	the ability to analyze frictional flow in pipes and piping networks and to compute the head loss and power requirements for chemical process equipments.
CO4	the ability to select the metering equipments and fluid moving machinery for an appropriate chemical engineering operations.

Course Code	:	CLPC14
Course Title	:	CHEMICAL ENGINEERING THERMODYNAMICS
Number of Credits	:	4
Prerequisites(Course code)	:	CLPC11
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To understand and appreciate thermodynamics as applied to various Chemical Engineering Processes.
2. To introduce the behavior of components in a mixture or solution.
3. To impart fundamental concepts of solution thermodynamics involving ideal and non-ideal systems.

COURSE CONTENT

Introduction to Basic laws and Terminologies in Thermodynamics- Statement of First law, P-V-T behavior of pure fluids - Heat effects accompanying chemical Reactions - Statements of second law- Clausius Inequality-Mathematical Statement of Second law-Third Law of Thermodynamics. Applications to Laws of Thermodynamics - Flow processes: Flow in pipes, Flow through nozzles, Compression- Refrigeration.

Thermodynamic Properties of Pure Fluids- Classification of Thermodynamic properties -Work function and Gibb's Free energy-Fundamental Property relations-Maxwell's equations- Clapyeron equation- Entropy Heat capacity relationship-Differential equations of Entropy- Relationship between C_p and C_v -Effect of pressure and volume on C_p and C_v - Gibb's Helmholtz Equation- Properties of Jacobians-Thermodynamic Relations through method of jacobians.

Thermodynamic Properties of Solutions - Introduction to fugacity and activity, Activity coefficients-Partial molar properties-Chemical potential as a partial molar property-Lewis randall rule-Roult's and henry's law-Gibbs Duhem Equation-Phase Equilibria and Chemical Reaction Equilibria - Criteria for phase equilibrium, Criterion of stability, Phase equilibria in single and multiple component systems, Duhem's theorem, VLE for Ideal solutions, Calculation of activity coefficients.

Reaction stoichiometry-Equilibrium constant- Feasibility of reaction- Effect of temperature, pressure, volume and other factors- Simultaneous Reactions

3. Y. V. C. Rao, *Chemical Engineering Thermodynamics*, Universities Press, 1997.
4. K.V. Narayanan, *A Textbook of Chemical Engineering Thermodynamics*, PHI Learning, 2004.

COURSE OUTCOMES

On completion of the course, the students will be familiar with

CO1	Fundamentals of thermodynamics as applied to various processes
CO2	Correlating the property changes for real fluids in terms of easily measurable macroscopic properties
CO3	Applying the fundamentals of solution thermodynamics to gas and liquid mixtures and correlate phase equilibrium of binary/multi component systems using various models
CO4	Calculating the equilibrium conversion and composition for reactions for chemical reaction

CO4	✓	✓		✓	✓				✓	✓	✓	✓

Course Code	:	CLPC15
Course Title	:	CHEMICAL TECHNOLOGY
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To impart the basic concepts of chemical technology.
2. To develop understanding about unit process and unit operations in various industries.
3. To learn manufacturing processes of organic and Inorganic Chemicals and its applications and major engineering problems encountered in the process
4. To learn the process flow sheet drawing for the manufacturing chemical processes.

COURSE CONTENT

Natural Products Processing: Production of pulp, paper and rayon, Manufacture of sugar, starch and starch derivatives, Gasification of coal and chemicals from coal.

Industrial Microbial Processes and Edible Oils: Fermentation processes for the production of ethyl alcohol, citric acid and antibiotics, Refining of edible oils and fats, fatty acids, Soaps and detergents.

Alkalies and Acids: Chlor - alkali Industries: Manufacture of Soda ash, Manufacture of caustic soda and chlorine - common salt. Sulphur and Sulphuric acid: Mining of sulphur and manufacture of sulphuric acid. Manufacture of hydrochloric acid.

Cement Gases, Water and Paints: Types and Manufacture of Portland cement, Glass: Industrial gases: Carbon dioxide, Nitrogen, Hydrogen, Oxygen and Acetylene - Manufacture of paints - Pigments

Fertilisers: Nitrogen Fertilisers; Synthetic ammonia, nitric acid, Urea, Phosphorous Fertilisers: Phosphate rock, phosphoric acid, super phosphate and Triple Super phosphate.

4. S.D. Shukla and G.N. Pandey, "*Text book of Chemical Technology*" Vol 2, Vikash Publishing Company, 1984.

COURSE OUTCOMES

On completion of the course, the students can

CO1	understand the various unit operations and processes with their symbols
CO2	understand the manufacturing process of natural products processing and industrial Microbial Processes and Edible Oils.
CO3	understand the various chemical reactions involved in the process
CO4	understand the manufacturing process of inorganic chemicals
CO5	draw the process Flowsheet and understand the major engineering problems encountered in the processes.

Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To study the fundamental concepts of heat transfer viz., conduction, convection, radiation, boiling and condensation.
2. To use these fundamentals in typical engineering applications (Heat exchanger and Evaporator) and current research.

COURSE CONTENT

Basic modes of heat transfer and the laws governing them. Steady state conduction through plane and composite walls general heat conduction equation, concepts of thermal diffusivity and equivalent thermal conductivity. Variable thermal conductivity, Radial Heat conduction through thick cylindrical and spherical vessels, concept of critical thickness, extended surfaces, Transient heat conduction

Convection – Dimensional analysis and empirical correlations, critical insulation thickness for cylindrical and spherical surfaces, Hydrodynamic and thermal Boundary layers, physical significance of the dimensionless groups. Boiling and condensation.

Heat Exchangers – classification and design, overall and individual film coefficients, mean temperature difference, LMTD correction factor for multiple pass exchanger, NTU and efficiency of Heat exchangers, use of efficiency charts.

Evaporation, single and multiple effect operation, material and Energy balance in evaporators, boiling point elevation, Duhring’s rule, effect of liquid head, illustrative examples.

Thermal Radiation laws, spectrum of electromagnetic radiation, Black and Gray bodies, and configuration factor – typical examples. Radiation exchange between black surfaces with and without participating medium. Radiation exchange between non-black surfaces.

REFERENCE BOOKS

1. Binay K. Dutta, "Heat Transfer Principles and applications" Prentice Hall of India Pvt. Ltd.
2. D.Q. Kern, "Process Heat Transfer," McGraw Hill Publishing.
3. J.P.Holman, "Heat Transfer" 10th edition, Mcgrawhill HED
4. Yunus A. Cengel "Heat Transfer : A Practical Approach" , 2nd edition, Mcgraw-Hill

COURSE OUTCOMES

On completion of the course, the student will be able

CO1	to estimate steady state and transient heat transfer rates from/to object such as tanks, pipes, building etc.
CO2	to develop equations for different types of convection and solve for heat transfer rate by convection.
CO3	to estimate the rate of radiation heat transfer with and without participating medium. Ability to identify the roll of re-radiating surface, radiation shields, boiling and condensation.
CO4	to carry out thermal analysis of heat exchanger using LMTD and effectiveness method.
CO5	to estimate steam economy, capacity of single and multiple effect evaporators.
CO6	to use the fundamentals learnt to understand the current research in heat transfer.

Course Code	:	CLPC17
Course Title	:	PARTICULATE SCIENCE AND TECHNOLOGY
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. Understand the philosophy of characterization of particulate materials and its application to various functionalities of particulates materials
2. Enable to apply Population Balance Equations (PBE) to study the dynamic behavior of various particulate processes
3. Understand the basic principles and design/ analysis of various process applications such as Size Reduction, Filtration, Sedimentation, Mixing and Agitation, material handling and metering etc.

COURSE CONTENT

Characteristics of Particulate Material: Properties and characterisation of particulate solids, analysis and technical methods for size and surface area distribution of powder; Flow properties of particulates. Population Balance Equations

Synthesis Methods: Introduction to synthesis of composite material by spray technique, aerosol generation, Introduction to size reduction equipment, energy and power requirement in milling operations, computer simulation techniques for mill performance.

Particulate Processes: Gas-liquid separation methods, Classification by size, agitation of liquids and mixing of solids, Fluidization, encapsulation etc., process performance simulations

Handling of Particulate Material: Conveying methods, Storage methods and design of silo, selection of feeders and elevators

REFERENCE BOOKS

1. *Martin Rhodes (Ed.), "Introduction to Particle Technology", 2nd Edn, Wiley- Interscience Publications, 2002*
2. *W.L.McCabe and J.C .Smith," Unit Operation of Chemical Engineering", 7th Edn., McGraw Hill., New York, 2004.*

3. *M. Coulson and J.F. Richardson, "Chemical Engineering", Vol. II, 5thEdn., Butterworth - Heinemann, 2002*

5. *Badger and Banchero, "Introduction to Chemical Engineering", 1stEdn., McGraw Hill, NewYork, 1955*

COURSE OUTCOMES

On completion of the course, students are expected to

CO1	understand the philosophy of characterization of particulate material
CO2	use Population Balance Equations to study the dynamics of various processes
CO3	design a process or analyze the performance of a process associated with particulate material
CO4	have sufficient knowledge to address the current challenges of particulate processes in industries including safety, environmental and ethical considerations

Course Code	:	CLPC18
Course Title	:	MASS TRANSFER - 1
Number of Credits	:	3
Prerequisites	:	CLPC11, CLPC14
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To learn the concept of diffusion in gas, liquid & solid.
2. To understand the basics of interphase mass transfer.
3. To learn application of gas-liquid operation and simultaneous heat and mass transfer operations.

COURSE CONTENT

Definition, Ficks law, Molecular and eddy diffusion, Diffusion in gaseous mixtures, liquid mixtures and solids, Types of solid diffusion, Pseudo steady state diffusion, measurement and calculation of diffusivities. Ordinary diffusion in multicomponent gaseous mixtures. Unsteady state Diffusion.

Equilibria, Mass transfer coefficients - Individual and overall with relations, Theories of mass transfer, Analogies between momentum, heat and mass transfer to predict mass transfer coefficients.

Absorption – Solubility, theory of gas absorption, Design of absorption towers, Concept of Equilibrium and operating lines. Mass Transfer Equipments- Batch and continuous Stage wise contactors and Differential contactors, Concept of HTU and NTU, Tower packings and packing characteristics, Non-isothermal absorbers, Case studies in absorption with chemical reactions.

Humidification Theory, Psychometric Chart, Adiabatic Saturator, Wet Bulb Theory, Methods of Humidification and dehumidification, Cooling tower theory, Design of cooling towers, Industrial cooling towers, Air conditioning process, Recirculating water gas humidification system.

Drying Theory and Mechanism, Drying Characteristics, Estimation of Drying time, drying rate curve, Classification of Driers, Through circulation driers design, Design of driers, Description and Application of Driers, Analysis of continuous driers.

Crystallization Theory, Solubility curve, Types of crystals, Principles of Crystallization, Supersaturation Theory, Factors governing nucleation and crystal growth. Theory of crystallization, Classification of crystallizers and their applications. Product size distribution by MSMR model. Industrial crystallizers, Crystallizer Design.

7. W.L. McCabe, J.C. Smith and P. Harriot, "Unit Operations of Chemical Engineering", 7th Edn., McGraw Hill Book Co., New York, 2004.

COURSE OUTCOMES

On completion of the course, the students will be

CO1	familiar with the basic phenomenon of mass transfer involving phases.
CO2	applying the mathematical and design concepts of mass transfer in gas-liquid systems like absorption, humidification, drying and crystallization.
CO3	gaining good knowledge of required optimum condition for a gas-liquid system

Course Code	:	CLPC19
Course Title	:	TRANSPORT PHENOMENA
Number of Credits	:	3
Prerequisites	:	CLPC13, CLPC16, CLPC18
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To find the velocity distribution in laminar and turbulent flow of Newtonian and non-Newtonian fluid
2. To obtain the temperature and concentration profiles in solids and in fluids respectively.

COURSE CONTENT

Mechanism of fluid transport: Laminar Flow - Velocity distribution in Laminar flow - Shell momentum balances - Flow through tubes, surfaces. Flow of non - Newtonian fluids

Equation of Motion: Equation of change for isothermal process – One dimensional equation of motion and continuity - Euler and Navier – Stokes equation. Dimensional analysis of equation of change

Turbulent Flow: Velocity distribution in turbulent flow - Semi empirical expressions for Reynolds stress. Interphase transport in isothermal system - Ergun's equation.

Heat Transfer analysis: Mechanism of heat transport - Temperature distribution in solids and fluids in laminar flow - Equations of change for multi component systems.

Mass Transfer analysis: Mechanism of mass transport - Concentration distribution in solids and in fluids laminar flow - Equations of change for multi component systems.

REFERENCE BOOKS

1. James Welty, Charles E. Wicks, Gregory L. Rorrer, Robert E. Wilson, “Fundamentals of Momentum, Heat and Mass Transfer”, 5th edition, Wiley; 2007
2. Bird R.B., Stewart W.E. and Light Foot E.N. Transport Phenomena, 2nd Edition, John Wiley and Sons., 2007.

4. J.L. Stuart, “Transport Phenomena”, John Wiley, New York, 1982.
5. W. J. Thomson, “Introduction to Transport Phenomena”, Prentice Hall, 2000.

COURSE OUTCOMES

On completion of the course, the students can

CO1	understand the analogy among momentum, heat and mass transport
CO2	develop differential momentum, heat, and mass balances for 1-D steady state problems using conservation principles
CO3	formulate a mathematical representation of velocity, temperature and concentration profiles in momentum, heat and mass transfer respectively in laminar flow.
CO4	identify the similarity among the correlations for flow, heat and mass transfer at interface
CO5	solve the flow, heat and mass transfer problems

CO5	✓	✓	✓	✓				✓	✓		✓	✓

Course Code	:	CLPC20
Course Title	:	Mass Transfer II
Number of Credits	:	4
Prerequisites	:	CLPC18
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To impart the basic concept of conventional mass transfer operations.
2. To learn the equilibrium characteristics of two phase mass transfer processes.
3. To understand the hydrodynamics and modes of operations in mass transfer equipment.
4. To develop the skill in the design and analysis of mass transfer equipment in process industries.

COURSE CONTENT

Distillation-Principle, theory, Vapor- Liquid Equilibria calculations- Effect of Pressure and temperature on VLE- Methods of distillations- flash, steam, simple, vacuum, molecular distillations- Azeotropic and Extractive distillation - Design of single stage flash , simple and steam distillation columns.

Design of Distillation -Stage-wise and continuous Differential contact operations- Design calculations using Ponchon-Savarit and Mc-Cabe Thiele Methods- Separation efficiency- Murphree Plate Efficiency, Point and overall efficiency interrelations- Reboilers and condensers- Open steam Distillation – Design of Packed bed distillation towers-HTU and NTU calculations. – Case Study: Multicomponent distillation of Petroleum crude and design aspects of distillation tower.

Extraction- Theory, LLE for different systems, Effect of Pressure and Temperature on LLE- Solubility criteria- Design of Batch and continuous extraction towers for miscible and immiscible systems- Industrial Applications: Case Study- Description of Extractors with reflux.

Leaching-Theory, Mechanism, Types of leaching, Solid - Liquid equilibria- Design of Batch and continuous extractors- Equipments and industrial applications.

Adsorption-Types of adsorption, nature of adsorbents-Adsorption hysteresis- Adsorption isotherms- Operation of adsorption columns- Design of Batch and continuous adsorbers- Mechanism of Break through plot and its effect.

6. W.L. McCabe, J.C. Smith and P. Harriot, "Unit Operations in Chemical Engg.", 7th Edn., McGraw Hill Book Co., New York, 2004.

COURSE OUTCOMES

On completion of the course, the students are expected to

CO1	acquire sufficient knowledge in the concepts of mass transfer operations in Chemical Process industries.
CO2	analyze the two phase mass transfer processes and apply in Process industries.
CO3	develop equilibrium characteristics for the design of transfer operations.
CO4	apply mathematical skills in the design of equipments for the separation of components in Chemical engineering Practice.

CO4	✓	✓	✓						✓		✓	

Course Code	:	CLPC21
Course Title	:	CHEMICAL REACTION ENGINEERING
Number of Credits	:	3
Prerequisites	:	CLPC16, CLPC14
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. Introduce basic concepts of chemical kinetics like homogeneous and heterogeneous reactions, rate of reaction, order and molecularity of reaction, concentration and temperature dependency of rate of reaction
2. Build up the concepts to analyze kinetic data and determine the rate expression for a reaction
3. This course will guide students to make use of key concepts and techniques of chemical kinetics to design single reactor and multiple reactors
4. Analyze multiple reactions to determine selectivity and yield
5. Work together in same-discipline teams to solve engineering problems

COURSE CONTENT

Basics of Kinetics: Introduction - kinetics of homogeneous reactions: Concentration dependent & Temperature dependent term of rate equation, Searching for a mechanism. Interpretation of Batch Reactor data.

Reactor Design: Introduction to Reactor Design. Single Ideal Reactors. Design of Reactor for Multiple Reaction: Design for single and multiple Reactions. Size comparison of single reactors for single reactions. Multiple Reactor system for single reactions.

Reactions in parallel, reactions in series and series - parallel reactions of first order. Recycle reactor, auto catalytic reactions.

Flow Behaviour of Reactors: Non - ideal flow: Residence time distribution studies: C, E, F and I curves, conversion calculations directly from tracer studies. Models for non-ideal flow - dispersion and tanks in series multi-parameter models

Heat Effects: Temperature and pressure effects on reaction,

REFERENCE BOOKS

4. Fogler.H.S., "Elements of Chemical Reaction Engineering", Prentice Hall of India Ltd., IIIrd Edition, 2000

COURSE OUTCOMES

On completion of the course, the students will

CO1	understand the classification of chemical reactions, factors affecting the rate of reaction, and the effect of temperature on rate of reaction.
CO2	gain the knowledge on Analyzing the laboratory data for determining the order of reaction and reaction rate constant Ability to relate rate of reaction with design equation for reactor sizing.
CO3	familiar with the comparisons of ideal reactor types (batch, plug flow, mixed flow, etc.) and select the most suitable one. Also familiar with the determining optimal ideal reactor design for multiple reactions for particular yield or selectivity.
CO4	gain knowledge on non-ideal reactors and troubleshooting the existing non-ideal reactors to improve its performance.

Course Code	:	CLPC22
Course Title	:	CHEMICAL PROCESS EQUIPMENT DESIGN
Number of Credits		4
Prerequisites	:	CLPC16, CLPC18, CLPC20, CLPC21
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To apply the basic principles/concepts learned in the subjects of Momentum transfer, Heat Transfer, Mass Transfer, Chemical Reaction Engineering in the design of chemical process equipment.
2. To develop the skill to select and design the appropriate process equipment for the required unit or process operation.
3. To analyses and evaluate the performance of existing equipment.

COURSE CONTENT

Design of Pressure Vessels: Design of pressure vessels and its components under internal pressure, external pressure and combined loadings. Design of heads/closures, Design of supports and Design of high pressure vessels

Design of Storage tanks, Agitated vessels and Reaction vessels

Design of Phase Separation Equipments – Decanter, Vapor Liquid Separator, Thickenner

Design of Heat Exchangers: Double pipe heat exchanger, Shell & Tube heat exchanger, Condenser, Reboilers, Evaporator

Design of Mass Transfer Equipments: Design of Tray and Packed columns for distillation, absorption operations, Design of dryers and cooling towers

6. V. V.Mahajani and S. B. Umarjii, "Joshi's Process Equipment Design", 4th Edn., Mac Millan Publishers India Limited, NewDelhi, 2009.

COURSE OUTCOMES

On completion of the course, students can

CO1	Integrate the knowledge acquired from core chemical engineering subjects for design of chemical process equipment
CO2	identify the process equipment problems and provide suitable alternate solutions
CO3	analyse and evaluate the performance of existing equipment

Mapping of Course Outcomes with Programme Outcomes

Course Code	:	CLPC23
Course Title	:	PROCESS MODELING AND SIMULATION
Number of Credits	:	3
Prerequisites	:	CLPC16, CLPC18, CLPC20, CLPC21
Course Type	:	PC

COURSE LEARNING OBJECTIVES

To develop mathematical model and dynamic simulator for chemical processes

COURSE CONTENTS

Introduction to process modeling and simulation - a systematic approach to model building, classification of models, Conservation principles, Degrees of freedom analysis. Tools of simulation, computer simulation, Use of simulated process model

Mathematical models for chemical engineering systems: Steady state lumped systems, process units, systems yielding linear and non-linear algebraic equations, solution of linear and non-linear algebraic equations

Unsteady state lumped systems: liquid level tank, gravity flow tank, Isothermal CSTR and Non-isothermal CSTR, Heated tank, distillation column,

Unsteady State Distributed System, Analysis laminar flow in pipe, sedimentation, conduction, heat exchanger, diffusion, plug flow reactor, Solution strategies for, ODE-IVP and ODE-BVP.

Solution strategies for distributed parameter models. Solving parabolic, elliptic and hyperbolic partial differential equations by finite difference method.

Introduction to MATLAB/Aspen, Simulation of chemical engineering problems

REFERENCE BOOKS

3. *Laurene V. Fausett, Applied Numerical Analysis using MATLAB, Second edition, Pearson, 2009*

COURSE OUTCOMES

Upon completing the course, the student should have understood

CO1 : the development of process models based on conservation principles

CO2: computational techniques to solve the process models.

Mapping of Course Outcomes with Programme Outcomes

CO1	✓			✓	✓						✓	
CO2	✓	✓	✓	✓	✓			✓	✓	✓	✓	✓

Course Code	:	CLPC24
Course Title	:	PROCESS DYNAMICS AND CONTROL
Number of Credits	:	4
Prerequisites	:	MAIR21
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To introduce students to the terminology, concepts and practices of input/output modeling and automatic process control.
2. To impart knowledgeable in the design of control systems and controller tuning for chemical processes.

COURSE CONTENT

Introduction – Control system, components of a feedback control system.

Laplace transforms - properties of Laplace transform, solution of linear differential equations using Laplace transform techniques, piecewise continuous functions.

Dynamic behaviour of systems - derivation of transfer functions for first and second order systems, liquid level, temperature, pressure, flow and concentration control processes, linearization of nonlinear systems, interacting and non-interacting systems.

Transient response of first and second order systems, natural frequency, damping factor, overshoot, decay ratio, rise time and settling time.

Transient analysis of control systems - block diagram algebra, overall transfer function of closed loop control systems, regulator and servo problems, transient response of first and second order systems with P, PI and PID controller. Definition of stability of control systems, Routh test, limitations of Routh test, Pade's approximation of time delay systems.

Introduction to frequency response - Bode diagrams, Bode diagrams for first and second order systems, P, PI, PID controllers, transportation lag. Bode stability criteria, phase margin and gain margin, Nichols chart, Ziegler - Nichols Optimum controller settings. Nyquist stability criteria, calculation of phase margin, gain margin, peak gain and resonant frequency using Nyquist plot.

Advanced Control- Cascade control - feed forward control - ratio control - dead time compensation- Internal Model Control-Control valves–Valve characteristics - Process identification.

5. G. Stephanopoulous, 'Chemical Process Control – Theory and Practice', Prentice Hall of India Ltd.,1984

COURSE OUTCOMES

On completion of the course, the student can

CO1	construct a model of the elements used in control systems from first principles leading to the development of transfer function models and compute the response of the developed transfer function for various forcing functions
CO2	derive transfer function models of controllers and compute the transient response under closed loop conditions.
CO3	evaluate the stability of the control system given a mathematical model of a control system including its components.
CO4	design a control system for robust performance using frequency response methods.
CO5	design various advanced control algorithms for chemical processes having specific problems

Course Code	:	CLPC25
Course Title	:	PROJECT ENGINEERING AND ECONOMICS
Number of Credits	:	3
Prerequisites	:	CLPC17
Course Type	:	PC

COURSE LEARNING OBJECTIVES

- i. For enabling the students to gain experience in organisation and implementation of a small project and thus acquire the necessary confidence to carry out main project in the final year.
- ii. To make the students to understand all the facility required for starting up a new industry apart from various unit operation
- iii. To make the students to gain all the knowledge in terms of financial analysis for starting up a new chemical industry.
- iv. To give a clear linkage between technical knowledge and commercial aspects of the major chemical engineering unit operations and design.

COURSE CONTENT

Introduction: Chemical Engineering plant design, Overall design consideration, Plant location and site selection, plat layout, factors affecting plant location, project planning and scheduling of projects, Process selection and Development: Process creation, Process design criteria, Process flow diagram (PFD), Piping and instrumentation diagram (P&ID).

Process utilities, process water, boiler feed water, water treatment & disposal, steam distribution, Furnaces, process pumps, compressors, vacuum pumps, valves, Piping design, layout, Support for piping insulation, plant constructions.

Process Instrumentation: measurement of temperature, pressure, fluid flow, liquid weight and weight flow rate, viscosity, pH, concentration, electrical and thermal conductivity, humidity of gases

Analysis of Cost Estimation: Cash flow for industrial operations, Factors affecting investment and production costs, Capital investments, Fixed capital and working capital, Estimation of capital investment, Cost indices, Estimation of total cost, Profit and cash flow, Net present value analysis, Balance sheet and Income statements, Methods for calculating Depreciation

Profitability Analysis: Profitability standards, Costs of capital, Methods of calculating profitability, Rate of return on investment, Payback period, Discounted cash flow rate of return, Net present worth, Payout period, Alternative investments, Replacements.

COURSE OUTCOMES

On completion of the course, the students can

CO1	understand how a project has to be started, their pre-requirements, flow chart preparation, economic calculation and so on.
CO2	draw a complete flowchart of a plant with complete cost analysis.
CO3	choose between the equipment/instruments of the same function based on both technical and commercial point of view
CO4	gain a good knowledge on when to run an industry in a profitable or without loss/gain of a particular concern.
CO5	work out the balance sheet and Income statement for a particular concern.

Course Code	:	CLLR11
Course Title	:	MOMENTUM TRANSFER LAB
Number of Credits	:	2
Co requisites	:	CLPC13
Course Type	:	ELR

COURSE LEARNING OBJECTIVES

To understand and apply the principles and concepts of momentum transfer theory learned in the momentum transfer course

LIST OF EXPERIMENTS

1. Flow through straight pipes
2. Flow through pipe fittings
3. Flow through helical/spiral coil
4. Flow through packed bed
5. Flow through fluidized bed
6. Flow measurement using venturi and orifice meter
7. Flow measurement using Pitot- static tube
8. Flow through Bernoulli's apparatus
9. Performance of centrifugal pump
10. Flow of non-newtonian fluid

REFERENCE BOOKS

1. *Lab Manual provided by NITT*
2. *W.L. McCabe, J.C. Smith and P. Harriott, "Unit operations of Chemical Engineering", 7th Edn., McGraw Hill, International Edn., 2005.*

COURSE OUTCOMES

After completion of the course, students are able to

CO1	understand and analyse the laminar and turbulent flow characteristics
CO2	understand the friction factor of fluid flow through pipes and packed column
CO3	understand the flow measurement using flow meters
CO4	understand the pump performance

Course Code	:	CLLR12
Course Title	:	INSTRUMENTAL ANALYSIS AND THERMODYNAMICS LAB
Number of Credits	:	2
Corequisites	:	CLPC14
Course Type	:	ELR

COURSE LEARNING OBJECTIVES

1. To provide hands on training to the students to familiarize various analytical instruments for the analysis of Chemicals (Bleaching powder, Coal, Cement and water)
2. To provide practical experience on the principles, viz., thermodynamic laws, Solution thermodynamics, Phase equilibrium and reaction equilibrium.

LIST OF EXPERIMENTS

1. Estimation of bleaching powder
2. Proximate analysis of coal
3. Analysis of water (pH, turbidity, conductivity, resistivity, suspended particles)
4. Estimation of salinity of water
5. Analysis of cement
6. Heat of solution by solubility method
7. Equilibrium constant determination
8. Liquid – Liquid equilibrium
9. Excess property determination
10. Vapour compression refrigeration
11. VLE using Othmer still

REFERENCE BOOKS

1. *J.M. Smith, H.C. Van Ness and M.M. Abbot, "Introduction to Engineering Thermodynamics", McGraw Hill, New York, 7th Edition, 2004*
2. *K.V. Narayanan, "A Text Book of Chemical Engineering Thermodynamics," Second second Edition, Prentice Hall of India, 2013.*
3. *Laboratory Manual*

COURSE OUTCOMES

On completion of the course, the student are able to

CO1	calibrate and perform analysis the chemicals using instruments
CO2	verify the fundamentals learnt viz., application of thermodynamic laws, solution thermodynamics, phase equilibrium and reaction equilibrium in Chemical Engineering thermodynamics by conducting experiments and carry out the evaluation

Course Code	:	CLLR13
Course Title	:	PARTICULATE SCIENCE & TECHNOLOGY LAB
Number of Credits	:	2
Co requisites	:	CLPC17
Course Type	:	ELR

COURSE LEARNING OBJECTIVES

1. To understand and verify the principles & concepts of learned in Particulate Science & Teechnology theory course and application to various particulate processes.
2. To gain knowledge through conducting experiments on characterization of single particle and powder samples, particulate process such as Comminution, Screen Analysis, Filtration, Mixing, Sedimentation, storage of solids in a silo and Elutriation.

LIST OF EXPERIMENTS

1. Particle size characterization (i) Image analysis, (ii) Settling velocity (iii) Particle density, (iv) Bulk density (Tap Density, Repose Density), (v) Angle of repose
2. Screen analysis for effectiveness of a screen
3. Influence of flight on comminution in a Ball mill
4. Evaluation of energy requirement in Jaw crusher
5. Evaluation of filtration characteristics for cake and filter medium
6. Evaluation of mixing characteristics and influence of baffles
7. Effect of inclination on sedimentation of suspension
8. Evaluation of elutriation parameters
9. Influence of discharge opening on solid discharge rates from silo
10. Discharge rates of non-cohesive powders through silo

REFERENCE BOOKS

1. *Lab Manual*
2. *W.L. McCabe, J.C. Smith and P. Harriott, "Unit operations of Chemical Engineering", 7th Edn., McGraw Hill, International Edn., 2005.*
3. *Martin Rhodes [2001], "Introduction to Particle Technology" 2ndEdn. Elsevier Publicaitons.*

COURSE OUTCOMES

After completion of the course, the students are able to

CO1	understand and interpret the particulate properties
CO2	understand the principle and evaluate the performance of comminution, screening operation, elutriation and solids discharge through silo.
CO3	use the performance characteristics to design particulate processes like sedimentation, filtration and mixing

Course Code	:	CLLR14
Course Title	:	HEAT TRANSFER LAB
Number of Credits	:	2
Prerequisites	:	CLPC16
Course Type	:	ELR

COURSE LEARNING OBJECTIVES

To provide experience on testing, and analysis of heat transfer concepts and heat transfer equipment

LIST OF EXPERIMENTS

1. Studies on natural convection phenomena.
2. Determination of heat transfer coefficient and establish a relation between h and ΔT .
3. Calculation of the overall heat transfer coefficient in a radiator setup with and without drafts.
4. Determination of the emissivity characteristics of a grey surface.
5. Transient heat conduction experiment for a set of different metal rods.
6. Determination of temperature variation along length of pin fin under forced convection.
7. Determination of the Stefan Boltzmann constant for radiation.
8. Film and drop wise condensation.
9. Determination of critical heat flux under boiling phenomenon.

REFERENCE BOOKS

Heat transfer laboratory manual

COURSE OUTCOMES

On completion of the course, the students are

CO1	able to verify the basis learnt in theory and also evaluate the performance of heat transfer equipment.

Course Title	:	MASS TRANSFER LAB
Number of Credits	:	2
Prerequisites	:	CLPC18
Course Type	:	ELR

COURSE LEARNING OBJECTIVES

To impart the practical experience for the students to apply the concepts of mass transfer principles and estimate the mass transfer parameters.

LIST OF EXPERIMENTS

1. Verification of Rayleigh's equation in simple distillation
2. Vaporization and thermal efficiency in steam distillation
3. Effect of temperature on surface evaporation
4. Stage efficiency in leaching
5. Diffusion of liquid and solid in air
6. Air drying characteristics
7. Vacuum drying characteristics
8. Mass transfer coefficient using a wetted wall column
9. Freundlich isotherm in batch adsorption
10. Break through point in continuous adsorption
11. Characteristics of a recirculation humidifier

Number of Credits	:	2
Corequisites	:	CLPC21
Course Type	:	ELR

COURSE LEARNING OBJECTIVES

Providing experience on experimentally to find activation energy and kinetics of particular chemical reaction, evaluation of performance of single and multiples reactors and evaluation of performance of non-ideal reactors

LIST OF EXPERIMENTS

1. Determination of activation energy of the given reaction using adiabatic reactor
2. Analysis of kinetics of liquid phase reaction in acbatch reactor with equimolar mixture.
3. Analysis of kinetics of liquid phase reaction in a batch reactor with non-euimolar mixture.
4. Evaluation of the performance of isothermal mixed flow reactor.
5. Evaluation of the performance of mixed flow reactor in series
6. Evaluation of the performance of plug flow reactor
7. Evaluation of the performance of mixed flow reactor followed by plug flow reactor
8. Residence time distribution studies in mixed flow reactor
9. Residence time distribution studies in plug flow reactor

Course Code	: CLLR18
Course Title	: PROCESS MODELING AND SIMULATION LAB
Number of Credits	: 2
Prerequisites	: CLPC23
Course Type	: ELR

COURSE LEARNING OBJECTIVES

To simulate the various chemical processes through software packages

LIST OF EXPERIMENTS:

1. Estimation of dew point and bubble point temperature of a hydrocarbon mixture
2. Simulation of flash drum
3. Design of distillation column
4. Optimization of a flow sheet or process
5. Determination of temperature profiles for heat exchanger
6. Concentration profiles for reactor
7. Simulation of Jacketed CSTR
8. Simulation of process
9. Simulation of evaporator/ distillation column/ extraction process

Course Code	:	CLPE11
Course Title	:	PETROLEUM AND PETROCHEMICAL ENGINEERING
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE LEARNING OBJECTIVES

1. To impart introductory knowledge of petroleum refining and corresponding processes.
2. To provide an insight into petrochemical industry.

COURSE CONTENT

Introduction & primary processing: Origin & formation of crude oil, Classification of crude, Characterization of crude, distillation practise, atmospheric distillation, vacuum distillation.

Secondary Processing: FCCU, Hydro cracking, Visbreaking, Coking, Reforming, Alkylation, Isomerisation and polymerization processes.

Treatment Techniques: Physical & chemical impurities in petroleum fractions, General mechanisms for removal of Sulphur, Treatment of LPG, gasoline, kerosene, diesel and lube oils. Properties of ATF and bitumen.

Petrochemicals: Building blocks, intermediates, major petrochemicals and their applications, Chemicals from methane and synthesis gas, Chemicals from olefins, Chemicals from aromatics, Synthetic fibres, plastics and rubber.

Environment and safety: Gaseous contaminants in refinery - sources & treatment, Process waste water - sources and treatment, Fire hazards – active & passive prevention, Occupational diseases and personal protective equipment, Site selection & plant layout.

REFERENCE BOOKS

1. *W.L. Nelson, "Petroleum Refinery Engineering", 4th Edn., McGraw Hill, New York, 1985*
2. *B. K. Bhaskara Rao, "Modern Petroleum Refining Processes", 5th Edn., Oxford and IBH Publishing Company, New Delhi, 2012.*

4. *R. A. Meyers, "Hand book of Petroleum Refining Processes", McGraw Hill, 3rd Edn. 2003.*

COURSE OUTCOMES

On completion of the course, the students will be able to

CO1	develop overview of petroleum industry and know about origin, formation, composition and characterization of crude oil.
CO2	comprehend primary processing mechanisms of crude to obtain various petroleum cuts.
CO3	know about secondary conversion techniques and treatment processes in petroleum refinery to get products of desired yield and quality.
CO4	understand manufacturing processes and applications of various petrochemicals.
CO5	grasp environmental and safety aspects in petroleum refinery and petrochemical industries.

Course Code	:	CLPE12
Course Title	:	COMPUTER APPLICATIONS IN CHEMICAL ENGINEERING
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE LEARNING OBJECTIVES:

The main objective of this course is to solve the chemical engineering problems by software packages

COURSE CONTENTS

Review of solution methods of non linear single variable equations, polynomials (determination of quadratic factors), solution to the linear set of simultaneous equations, ill conditioned matrix, and solution to the set of nonlinear equations

Numerical integration: Trapezoidal and Simpson's rules, Function Approximation: Least square curve fit

Interpolation & regression: Lagrange interpolation, forward difference, backward difference and central difference interpolation methods, linear regression, polynomial regression. Ordinary Differential equations (Initial value problems): Euler method, Runge-Kutta methods, predictor corrector methods, ODE-BVP: Finite difference techniques

Partial differential equations: Helliptical, parabolic, hyperbolic PDE's, Solving chemical engineering problems by software packages

5. *Cutlip M. B. and Shacham M., "Problem Solving in Chemical and Biochemical Engineering with POLYMATH, EXCELL and MATLAB", 2nd Ed., Prentice Hall,2008.*

COURSE OUTCOMES:

At the end of the course students will be able to

CO1	formulate the problem for chemical engineering applications
CO2	apply the appropriate numerical technique for the problem
CO3	solve the problem by using software packages

Course Code	:	CLPE13
Course Title	:	POLYMER SCIENCE AND TECHNOLOGY
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE LEARNING OBJECTIVES

1. To provide a fundamental knowledge on polymers and their chemical, physical and mechanical behavior.
2. Emphasis is on the processing techniques, along with the production of polymers.

COURSE CONTENT

Characteristics, Analysis of Polymers: The science of large molecules. Theory of polymer solutions. Measurement of molecular weight and size. Analysis and testing of polymers.

Polymer material structure and Properties: Deformation, flow and melt characteristics. Morphology and order in crystalline polymers. Rheology and the mechanical properties of polymers. Polymer structure and physical properties.

Polymer synthesis and reaction engineering: Condensation polymerization. Addition polymerization. Ionic and coordination polymerization. copolymerisation. polymerization conditions and polymer reactions.

Industrial polymers: Manufacturing processes and applications: Hydrocarbon plastics and elastomers. Other carbon chain polymers. Heterochain thermoplastics. Thermosetting resins.

Processing of polymers: Plastics, Fibres and Elastomers: Polymers developed for synthetic plastics, fibres and elastomer applications. Plastics technology. Fiber technology. Elastomer technology.

REFERENCE BOOKS

3. *"Encyclopedia of Polymer Science and Technology", John Wiley-Inter Science.*

COURSE OUTCOMES

At the end of the course, the students will be able to

CO1	apply the knowledge and to understand the properties and use of polymeric materials and other related environmental aspects.
CO2	acquire sufficient knowledge on how polymeric materials are build-up from molecular level to macroscopic level and the relationship between structure and material properties.
CO3	equip with knowledge on synthesis/modification, characterization, processing and applications of synthetic polymers.
CO4	understand and apply the various processing and manufacturing techniques.
CO5	correlate structure-processing-property relationships for polymers, blends and composites.

Course Code	:	CLPE14
Course Title	:	MODERN SEPERATION PROCESSES
Number of Credits	:	3
Prerequisites	:	CLPC18
Course Type	:	PE

COURSE LEARNING OBJECTIVES

1. This subject deals with the application of the science and engineering science that you have learned to the separation of chemical and wastewater.
2. To understand how separation work, and to further develop your ability to apply basic principles to the solution of specific problems.

COURSE CONTENT

Review of Conventional separation processes separation techniques based on size, surface properties, ionic properties and other special characteristics of substances.

Sorption Techniques: Types and choice of adsorbents, chromatographic techniques, types, Retention theory mechanism, equipment and commercial processes, Recent advances.

Membrane Techniques: Types and choice of membranes, Membrane reactors, commercial applications. Membrane process concepts- Dialysis, Reverse Osmosis, Nanofiltration, Ultra filtration ,Micro filtration, Gas permeation and Pervaporation.

Ionic Separation: Process concept of electro dialysis, Ion- exchange, electrophoresis, equipments, commercial processes.

Other Techniques: Zone melting, adductive crystallization, Supercritical fluid extraction, Industrial Effluent Treatment by Modern Techniques

REFERENCE BOOKS

3. *B. Sivasankar, "Bioseparations – Principles and Techniques", Prentice Hall of India Pvt. Ltd, New Delhi, 2005.*

COURSE OUTCOMES

On completion of the course, the students will be able to

CO1	select appropriate separation technique for solving the industrial problems
CO2	understand the design and troubleshooting the controlling factors for modern separations.
CO3	design separation system for solids, liquids and gases for effective solution of intended problem.

Course Code	:	CLPE15
Course Title	:	SAFETY IN CHEMICAL PROCESS INDUSTRIES
Number of Credits	:	3
Prerequisites	:	CLPC17
Course Type	:	PE

COURSE LEARNING OBJECTIVES

1. To provide a general idea about safety in chemical industries.
2. To imbibe in students a culture of safer practices.

COURSE CONTENT

Introduction: Role of chemical engineer in process industries; Industrial Hazards – Fire hazards and its prevention, Radiation hazards and control of exposure to radiation, Mechanical hazards, Electrical hazards, Construction hazards.

Psychology, hygiene & other industrial hazards: Industrial psychology, Industrial hygiene, Housekeeping, Industrial lighting and ventilation, Industrial noise, Occupational diseases and prevention methods, Personal protective equipments; Site selection and plant layout,

Instrumentation and control for safe operation: Pressure, Temperature and Level controllers; Risk Management and Hazard Analysis – Steps in risk management, Risk analysis using HAZOP, FTA etc.

Case studies pertaining to chemical industries: Bhopal gas tragedy, causes, affects & lessons learnt, other cases; Economics of safety – Financial costs to individual, family, organization and society.

Process safety and process safety management, Legal framework for industrial safety and environment in India- The Factories Act, The Environmental (Protection) Act, The Workmen's compensation Act, The Employee State Insurance Act.

5. *Daniel A. Crowl and Joseph F. Louvar, "Chemical Process Safety, Fundamentals with Applications", 2nd Edition, Prentice Hall, Inc. ISBN 0-13-018176-5.*

COURSE OUTCOMES

On completion of the course, the students are expected to be with familiar with

CO1	hazards in chemical industries and their mitigation
CO2	safety aspects in plan site selection, design & layout and psychological approach to process safety
CO3	occupational diseases and their prevention, process control for process safety, process safety and PSM
CO4	case studies of industrial disasters, risk management methodologies
CO5	legislations for safety in chemical industries & environmental protection, economics of providing safety

CO5			✓	✓		✓		✓		✓		✓

Course Code	:	CLPE16
Course Title	:	MATERIAL SCIENCE AND TECHNOLOGY
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE LEARNING OBJECTIVES

1. To impart the basic concept of material science.
2. To understand the various properties, corrosion and heat treatment of engineering materials
3. To understand the engineering requirement and selections of materials based on the properties for various applications.

COURSE CONTENT

Atomic Bonding: Classes of engineering materials - engineering requirement of materials - selection of materials - structure of atoms and molecules - Bonding in solids - types of bonds and comparison of bonds.

Structure and Imperfections in Crystals: Crystal structure Crystal geometry, structure of solids, methods of determining structures. Imperfection in crystals - types of imperfection. Point imperfection, diffusion in solids - self diffusion Fick's law, Applications of diffusion.

Properties and Corrosion of Material: Mechanical, Electrical and magnetic properties of materials - Deformation of materials - Heat Treatment techniques - corrosion, theories of corrosion - control and prevention of corrosion.

Metals: Engineering materials - ferrous metals - Iron and their alloys Iron and steel Iron carbon equilibrium diagram. Non-ferrous metals and alloys - Aluminium, copper, Zinc, lead, Nickel and their alloys with reference to the application in chemical industries.

Non Metals: Inorganic materials: Ceramics, Glass and refractories - organic materials: wood, plastics, and rubber and wood - Advanced materials (Biomaterials, nanomaterials and composites) with special reference to the applications in chemical Industries.

REFERENCE BOOKS

1. Lawrence H. Van Vlack, "Elements of Material Science and Engineering", 1971.

3. William D. Callister, "Materials Science and Engineering", 7th edn, John Wiley & Sons, Inc.
4. V. Raghavan, Materials Science and Engineering, Prentice Hall.

COURSE OUTCOMES

After completion of the course, the students can

CO1	understand the basics knowledge such as internal structure, crystal geometry, crystal imperfection of the engineering materials
CO2	understand the various properties and corrosion behavior of the selected materials in chemical industries
CO3	provide experience in the metallic and nonmetallic material selection and handling material in chemical engineering in the areas of equipment design

Course Title	:	Industrial Process Biotechnology
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PC

COURSE LEARNING OBJECTIVES

1. To impart the basic concepts of bioprocesses
2. To develop understanding about application of engineering principles in bioprocesses.

COURSE CONTENT

Rates and Patterns of Changes in cell cultures: Kinetics of substrate utilization, biomass and product formation in cellular cultures. Stoichiometry of growth and product formation

Physical Parameters in Bioreactors and Downstream Separations: Transport phenomena and modelling in Bioprocesses. Product recovery operations.

Sensors, Monitoring and control systems in Bioprocesses: Instrumentation and process control in Bioprocesses.

Biochemical Reaction Engineering and Bioreactor design: Design and analysis of Bioreactors. Dynamic models and stability, non-ideal mixing, residence time. Sterilisation reactors. Immobilised bio-catalysts and multiphase bio reactors.

Fermentation Technology and R-DNA Technology: Bio-process Technology and Genetic Engineering.

REFERENCE BOOKS

3. *R.Lovitt and M.Jones, "Biochemical Reaction Engineering" in Chemical Engineering, Vol. III, 3rd Edn., Edited by J. F. Richardson and Peacock, Pergamon, London, 1994.*

COURSE OUTCOMES

On completion of the course, the students can

CO1	analyze the kinetics of cell growth and product formation from biomass.
CO2	model bioprocesses and design downstream processes involved in product recovery.
CO3	identify instruments and model control systems involved in bioprocesses.
CO4	design and analyze bioreactors.
CO5	identify and familiarize with advanced technologies in bioprocesses

Course Code	:	CLPE18
Course Title	:	FLUIDIZATION ENGINEERING
Number of Credits	:	3
Prerequisites	:	CLPC13, CLPC17
Course Type	:	PE

COURSE LEARNING OBJECTIVES

1. To introduce students to the concepts and applications of fluidized bed systems
2. To introduce the students to development of models for fluidized bed systems
3. To impart knowledge on Heat and mass transfer in fluidized bed systems
4. To impart knowledgeable on the importance on Entrainment and elutriation in fluidized bed systems

COURSE CONTENT

Introduction and applications: Introduction to fluidised bed systems. Fundamentals of fluidisation. Industrial applications of fluidised beds - Physical operations. Synthesis reactions, cracking and reforming of hydrocarbons, Gasification, Carbonisation, Gas-solid reactions, calcining and clinkering

Gross behaviour of Fluidised beds: Gross behaviour of fluidised beds. Minimum and terminal velocities in fluidised beds. Types of fluidisation. Design of distributors. Voidage in fluidised beds. TDH, variation in size distribution with height, viscosity and fluidity of fluidised beds, Power consumption

Analysis of bubble and emulsion Phase: Davidson's model, Frequency measurements, bubbles in ordinary bubbling bed model for bubble phase. Emulsion phase: Experimental findings. Turn over rate of solids. Bubbling bed model for emulsion phase. Interchange co-efficients

Flow pattern of Gas and heat & mass transfer in Fluidised beds: Flow pattern of gas through fluidised beds. Experimental findings. The bubbling bed models for gas inter change Interpretation of Gas mixing data. Heat and Mass Transfer between fluid and solid: Experiment findings on Heat and Mass Transfer. Heat and mass transfer rates from bubbling bed model

Heat transfer between Fluidised beds and surfaces - Entrainment & Elutriation: Heat transfer between fluidised beds and surfaces: Experiment finding theories of bed heat transfer comparison of theories. Entrainment of or above TDH, model for Entrainment and application of the entrainment model to elutriation

REFERENCE BOOKS

1. D. Kunii and O. Levenspiel, "Fluidisation Engineering", 2nd Edn., Butterworth Heinemann, 1991.

COURSE OUTCOMES

On completion of the course, the student can

CO1	analyze and apply fluidized bed systems for Industrial applications
CO2	analyze the fluidized bed systems and apply models to predict the bubble behaviors
CO3	analyze and estimate heat and mass transfer in fluidised beds
CO4	analyse eentrainments and elutriation in fluidized bed systems and value its importance in the design of fluidized bed columns.

Course Code	:	CLPE19
Course Title	:	PHARMACEUTICAL TECHNOLOGY
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE LEARNING OBJECTIVES

1. To provide the basic knowledge on functional group identification, chemical bonding with their mechanism
2. To provide the basic knowledge of principles involved in the identification and estimation of Pharmaceutical substances.
3. To understand the properties and principles of medicinal agents that originates from organic and inorganic sources and their application in pharmaceutical industry.

COURSE CONTENT

Introduction to Physical pharmaceutics: Metrology and calculations, Molecular structure, properties and states of matter, solutions, Phase equilibria, Micromeritic and powder rheology, Surface and interfacial phenomena, Dispersion systems

Diffusion and dissolution, kinetics and drug stability, Viscosity and rheology, Polymer science and applications.

Formulations and development, Packaging, Introduction to industrial processing, Transport Phenomena (Fluid Flow, Heat Transfer and Mass Transfer)

Particulate Technology (Particle Size, Size reduction, Size Separation, Powder Flow and Compaction), Unit Operations (Mixing, Evaporation, Filtration, Centrifugation, Extraction, Distillation, and Drying)

Materials of Pharmaceutical Plant Construction, Good Manufacturing Practice (GMP's) Guidelines

REFERENCE BOOKS

1. Alfred N. Martin, "Physical Chemical and Biopharmaceutical Principles in the Pharmaceutical Sciences", 6th Edn., Lippincott Williams & Wilkins, 2006.

3. Sidney James Carter, "Cooper and Gunn's Tutorial Pharmacy", CBS Publishers & Distributors, 1986.

COURSE OUTCOMES

After completion of the course, the students can

CO1	acquire basic knowledge of preformulation and formulation of drugs, pharmaceutical unit operations and manufacturing, packaging and quality control of pharmaceutical dosage forms.
CO2	acquire a knowledge on pharmaceutical unit operations and manufacturing, packaging and quality control of pharmaceutical dosage forms.
CO3	trained to conceptualize, design, build up, maintain and operate various industrial processes and machineries involved in the process.
CO4	understand and apply the various processing and manufacturing techniques.
CO5	formulate a pure drug substance into a dosage form.

Course Code	:	CLPE20
Course Title	:	PROCESS INTENSIFICATION
Number of Credits	:	3
Prerequisites	:	CLPC16, CLPC18, CLPC21
Course Type	:	PE

COURSE LEARNING OBJECTIVES

To understand the scientific background, techniques and applications of intensification in the process industries

COURSE CONTENT

Introduction: Theory of Process Intensification, Process Intensification (PI) Applications, Main benefits from process intensification, Process-Intensifying equipment

Process Intensification through micro reaction technology: Effect of miniaturization on unit operations and reactions, Design rules, Implementation of Micro-reaction Technology, Micro-fabrication of reaction and unit operation devices - Wet and Dry Etching processes.

Scales of mixing, Flow patterns in reactors, Mixing in stirred tanks: Scale up of mixing, Heat transfer. Mixing in intensified equipment, Atomizer, Nebulizers, Static mixers, design of mixers, Ejectors, Tee mixers, Impinging jets, Rotor stator mixers, Applications of static mixers, Hige reactors.

Combined chemical reactor heat exchangers and reactor separators: Principles of operation; Reactive absorption, Reactive distillation, Reactive Extraction - Case Studies.

Compact heat exchangers: Classification of compact heat exchangers, Plate heat exchangers, Spiral heat exchangers, Flow pattern, Heat transfer and pressure drop, Flat tube-and-fin heat exchangers, Micro channel heat exchangers, Phase-change heat transfer, Selection of heat exchanger and design technology, Integrated heat exchangers in separation processes.

Enhanced fields: Energy based intensifications, Sono-chemistry, Basics of cavitation, Cavitation reactors, The Rotating electrolytic Cell, Electrostatic fields, Sonocrystallization, Supercritical fluids.

REFERENCE BOOKS

2. *Reay D., Ramshaw C., Harvey A., Process Intensification, Butterworth Heinemann, 2008.*

COURSE OUTCOMES

On completion of the course, the student can

CO1	apply process intensification in industrial processes.
CO2	implement methodologies for process intensification.
CO3	understand scale up issues in the chemical processes.
CO4	identify and solve process challenges using intensification technologies.

Course Code	:	CLPE21
Course Title	:	ELECTROCHEMICAL REACTION ENGINEERING
Number of Credits	:	3
Prerequisites	:	CLPC18, CLPC21
Course Type	:	PE

COURSE LEARNING OBJECTIVES

To familiarize in the aspects of current-voltage relationships & estimation of mass transfer coefficient, PFR & CSTR systems model

COURSE CONTENT

Electrolytic processes; current-voltage relationships in electrolytic reactors; the limiting current plateau; mass & energy balance, and efficiency in electrochemical reactors; The estimation of mass transport coefficients at commonly occurring electrodes; The estimation of mass transport coefficients under enhanced convection conditions.

Electrolytic reactors: plug flow model of electrochemical reactors employing parallel plate reactor; Plug flow model under constant mass flux conditions; PFM analysis with electrolyte recycling PFM and real electrochemical reactors. General view of simple CSTER systems; CSTER in cascades; CSTER analysis of batch electrochemical reactors, CSTER analysis of semi-continuous electrochemical reactors. CSTER analysis of electrolyte recycling; Batch reactor combined with electrolyte recycling.

General aspects of thermal behaviour in electrochemical reactor; Thermal behaviour under CSTER conditions; The estimation of heat losses; the thermal behaviour under PFR conditions; Thermal behaviour of batch electrochemical reactors.

General notions on optimization of electrochemical reactor –elementary process optimization – IBL formula – optimization of electro refining process – Jaskula formula – optimization of a general electrolytic process – The Beck formula.

REFERENCE BOOKS

3. T.Z.Fahidy, “*Principles of Electrochemical Reactor Analysis*”, Elsevier, 1985
4. D.J. Pickett, “*Electrochemical Reactor Designs*”, Elsevier Scientific Publishing Company, New York, 1979.

COURSE OUTCOMES

On completion of the course, the student can

CO1	understand kinetics of single and multiple electrochemical reaction
CO2	understand mass transport process in the electrochemical system
CO3	design of electrochemical reactors.
CO4	analyze electrochemical design models, thermal behaviour of reactors and electrochemical reactors

Course Code	:	CLPE22
Course Title	:	FOOD PROCESSING TECHNOLOGY
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE LEARNING OBJECTIVES

The course is aimed to impart knowledge of various areas related to Food processing and technology.

COURSE CONTENT

Review of mathematics principles and applications in food process engineering. Material balances: Dilution, Dehydration, Blending, and Multistage process. Gases and vapors, Energy Balances: Enthalpy changes. Properties of saturated and super-heated steam. Fluid flow: Rheology, Continuous viscosity monitoring and control, Transportation of fluids.

Heat Transfer: Mechanism, Temperature measuring devices, Steady state and unsteady state heat transfer. Thermal process calculations, Aseptic processing, Refrigeration, Evaporation, Improving the economy of evaporators.

Physical separation process: Filtration, sieving, gravity separation. Mass transfer: Leaching, Super critical extraction, mass diffusion, psychrometry, Simultaneous heat and mass transfer, Drying: Spray. Freeze, Vacuum belt drier.

Food Canning Technology: Fundamentals of food canning technology, Heat sterilization of canned food, containers-metal, glass and flexible packaging, Canning procedures for fruits, vegetables, meats, poultry and marine products

Emerging Food process Technology: Microwave and Radio frequency heating, High pressure processing, Pulse electric –Field processing, Advanced membrane separation, Food nano-biotechnology.

REFERENCE BOOKS

1. Romeo T.Toledo,Rakesh K.Singh and Fanbin Kong, “Fundamental of Food Process Engineering”,Springer,2018

3. J.M. Jackson & B.M. Shinn, "Fundamentals of Food Canning Technology", AVIPublishing Co., New York, 1978

COURSE OUTCOMES

On completion of the course, the students will be familiar with

CO1	application of biotechnology in food industry.
CO2	appropriate processing, preservation, and packaging methods.
CO3	the aspects of food safety.
CO4	opportunities for higher studies in food science, chemical engineering, biotechnology, and allied fields.

Course Title	:	BIOREFINERY ENGINEERING
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE LEARNING OBJECTIVES

1. To impart knowledge on the biomass resources available and its importance
2. To illustrate the fuels and chemicals production methods from biomass.
3. To inculcate knowledge on the conversion of waste into wealth.

COURSE CONTENT

Introduction: Vision of Bioenergy and Biochemicals, Biorefinery concept, Feedstock preparation and characterization, Pretreatment techniques, Processes, Biorefinery products, Evaluation of Biorefinery performances

Lignocellulosic Biorefinery: Classification of Sources, Unit operations and processes involving in LCB biorefinery, Bioethanol, ABE fermentation, Thermochemical conversion of lignocellulosic biomass

Platform Chemicals from biorefinery: Introduction to Platform chemicals, Chemical and biological routes for the production, detailed discussion on production of HMF, Succinic acid, Levulinic acid, and Propylene glycol.

Biodiesel technology: Feed Stock preparation and characterization, enzymatic and catalytic production, biodiesel quality assessment, storage

Waste biorefinery: Thermochemical conversion of waste biomass, pyrolysis, gasification, bio hydrogen production, biogas product

REFERENCE BOOKS

1. *Hongzhang Chen, "Lignocellulose Biorefinery Engineering" Elsevier (2015)*
2. *Thallada Bhaskar et al "Waste Biorefinery" Elsevier (2018)*

COURSE OUTCOMES

On completion of the course, the student can

CO1	understand the feed stock preparation and characterization of biofuels.
CO2	learn techniques and methods used in Biorefinery.
CO3	understand the concept of platform chemicals and their importance.
CO4	acquire knowledge on converting waste to biofuels.

Course Title	:	Water Treatment Technology
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE LEARNING OBJECTIVES:

1. To impart basic knowledge on importance of water treatment and quality aspects.
2. To impart knowledge on different unit processes and unit operations involved in water treatment.
3. To enable the students to design water treatment system

COURSE CONTENT

Introduction to Physical/Chemical Water Treatment Processes: Objectives of water treatment, water sources, water contaminants, overview of methods used to treat water, Water Treatment Regulations, Particles in Water, Natural Organic Material (NOM), Particle Charge (Double Layer and DLVO Theory) and Particle Size Distributions

Coagulation: particle destabilization, hydrolyzing metals, polymers, mechanisms, jar tests, enhanced coagulation, Flocculation and Mixing: basics, theory, practice, Sedimentation: discrete particle behavior, flocculent settling, sedimentation basins, Design of sedimentation basins.

Depth Filtration: history, hydraulics, particle capture Mechanisms, types of filter, Disinfection: pathogens, disinfectants, inactivation kinetics, disinfection by-products

Chemical Oxidation: oxidants, advanced oxidation processes, Adsorption: equilibrium, kinetics, activated carbon, Ion Exchange

Air stripping, Membrane Processes: microfiltration, ultrafiltration, nanofiltration, reverse osmosis, forward osmosis, fouling, removal of selected constituents

REFERENCE BOOKS

1. *MWH's Water Treatment: Principles and Design, 3rd edition, John Wiley (2012).*
2. *Water Quality and Treatment, 5th edition, R. Letterman, Editor American Water Works Association, Denver, CO (1999).*
3. *Kawamura, Susumu. Integrated Design and Operation of Water Treatment Facilities, 2nd Edn., John Wiley and Sons, Inc., 2000.*

COURSE OUTCOMES

On completion of this course the students would have

CO1	required essential knowledge for the selection of water treatment processes.
CO2	knowledge on assessing the water quality.
CO3	the ability to design water treatment plant.

CO3	✓	✓	✓	✓	✓			✓			✓	✓

Course Code	:	CLPE25
Course Title	:	BIOCHEMICAL ENGINEERING
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE LEARNING OBJECTIVES

1. To impart the basic concepts of biochemical engineering
2. To develop understanding about biochemistry and bioprocesses

COURSE CONTENT

Introduction to Bioscience: Types of Microorganisms: Structure and function of microbial cells. Fundamentals of microbial growth, batch and continuous culture. Isolation and purification of Enzymes from cells. Cell Growth Measurement.

Functioning of Cells and Fundamental Molecular Biology: Metabolism and bio-energetics, Photosynthesis, carbon metabolism, EMP pathway, tricarboxylic cycle and electron transport chain, aerobic and anaerobic metabolic pathways. Synthesis and regulation of biomolecules, fundamentals of microbial genetics, role of RNA and DNA.

Enzyme kinetics: Simple enzyme kinetics, Enzyme reactor with simple kinetics. Inhibition of enzyme reactions. Other influences on enzyme activity. Immobilization of enzymes. Effect of mass transfer in immobilised enzyme particle systems. Industrial applications of enzymes.

Cell kinetics and fermenter design: Growth cycle for batch cultivation, Stirred-tank fermenter, Multiple fermenters connected in series. Cell recycling. Structured Model.

Introduction to Bioreactor design: Continuously Stirred aerated tank bioreactors. Mixing power correlation. Determination of volumetric mass transfer rate of oxygen from air bubbles and effect of mechanical mixing and aeration on oxygen transfer rate, heat transfer and power consumption. Multiphase bioreactors and their applications. Downstream processing and product recovery in bioprocesses.

4. M. L. Shuler and F. Kargi, " *Bio Process Engineering: Basic concepts*", 2ndEdn., Prentice Hall of India, New Delhi, 2002.

COURSE OUTCOMES

On completion of the course, the students can

CO1	enhance knowledge in the aspects of cell structure and its functions
CO2	identify the importance of biomolecules in metabolic processes.
CO3	analyze the kinetics of enzymatic reactions and their inhibitions.
CO4	evaluate and model the cell growth kinetics in a bioreactor.
CO5	design a bioprocess with various unit operations involved in it.

Course Code	:	CLPE26
Course Title	:	Air Pollution Control Engineering
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE OBJECTIVES :

To understand the air pollutants, measurement techniques, control methods.

COURSE CONTENT:

Emission sources, types of air pollutants, effects of air pollutants on human, materials and plants
Introduction to air pollution control acts.

Air pollution measurements, emission estimates: sample collection, standard analytical methods, metrology for air pollution control engineers.

Air pollutant concentration models: Fixed box and Diffusion models

Particulate Emission Control: Nature of Particulate pollutants, Control of primary particulates, Control of VOCs. Control of sulphur and nitrogen oxides. Air pollutants effect on global climate

Reference Books

Course Title	:	Industrial Wastewater Treatment
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE OBJECTIVES:

To understand the sources of wastewater,
To learn the treatment methods and equipments

COURSE CONTENT:

Introduction: Characterisation and monitoring of industrial waste water, recycling and reuse.
Selection of treatment techniques;

Physico-Chemical Treatment Methods: sedimentation, coagulation, flocculation, thickening, floatation.

Biological Treatment Fundamentals: Microbial metabolism, bacterial growth kinetics; Biological nitrification, denitrification and phosphorus removal; Anaerobic fermentation and aerobic treatment.

Aerated lagoon, activated sludge systems, trickling filter, sequential batch reactor, fluidized bed bioreactors.

Advanced Treatment Processes: Advanced oxidation systems – Fenton process, electrochemical oxidation, sono-chemical oxidation; Membrane processes, Wet air oxidation, Adsorption and ion-exchange, Sludge treatment.

Course Code	:	CLPE28
Course Title	:	Fuel Cells and Batteries
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	PE

COURSE LEARNING OBJECTIVES:

To understand working principles, types and design of primary and secondary batteries and fuel cells

COURSE CONTENTS:

Basic concepts – Components of cells and batteries, Classification of cells and batteries, Operation of a cell, Specifications – Free energy, theoretical cell voltage, specific capacity, specific energy, energy density, memory effect, cycle life, shelf life, state of charge (SOC) and depth of discharge (DOD), internal resistance and coulombic efficiency.

Electrochemical principles and reactions – electrical double layer, discharge characteristics of cell and polarization, Electrode processes and Tafel polarization, thermodynamic background and Nernst equation. Primary and secondary batteries – Zn/C, Zn/air, alkaline cells, lithium primary batteries, lead-acid, Ni/Cd, Ni/MH and Lithium secondary batteries (Components, Chemistry and Performance characteristics). Applications of storage batteries.

Fuel Cells: Basic principle, anodic and cathodic reaction, Nernst equation and open circuit potential, pressure and temperature effect. Types of Fuel Cells: Proton Exchange Membrane Fuel Cells, alkaline fuel cells, phosphoric acid, solid oxide, molten carbonate, direct methanol fuel cells.

PEM Fuel Cell components: Anode and Cathode materials, catalysts, membrane, PEM Flow field design, Fuel Cell Stack - Rate of mass transfer of reactants and products - water management, Heat removal from the stack.

Fuels for Fuel Cells: Hydrogen, methane, methanol - Sources and preparation, reformation processes for hydrogen – clean up and storage of the fuels, advantages and disadvantages of using hydrogen as fuel. Fuel cell outlook, Applications of fuel cells – Industrial and commercial.

REFERENCE BOOKS

4. *F. Barbir, 'PEM fuel cells: theory and practice', Elsevier, Burlington, MA, (2005).*

COURSE OUTCOMES

After studying this course, the students will able to

CO1	know the basics and working principles of the batteries and Fuel cells
CO2	understand the various types and applications of primary and secondary batteries,
CO3	select suitable materials for electrode, catalyst and membrane for fuel cells
CO4	design stacks, fuels and reformation of fuels for fuel cells

Course Code	:	CLPE29
Course Title	:	Heterogeneous Chemical Reaction Engineering
Number of Credits	:	3
Prerequisites	:	CLPC21
Course Type	:	PE

COURSE LEARNING OBJECTIVES

1. To understand the catalyst physical characterisation of surface area, pore volume, and pore size.
2. To understand the kinetics of catalytic chemical reaction and reactor design and non-catalytic chemical reaction and reactor design.
3. To understand the operation and troubleshooting of heterogeneous reactors.

COURSE CONTENT

Analysis of Non-catalytic fluid solid reaction: Kinetics of non-catalytic fluid-particle reactions, various models, application to design.

Catalyst preparation and characterization: Catalysis - Nature of catalyses, methods of evaluation of catalysis, factors affecting the choice of catalysts, promoters, inhibitors, and supports, catalyst specifications, preparation and characterization of catalysts, surface area measurement by BET method, pore size distribution, catalyst, poison, mechanism and kinetics of catalyst, deactivation.

Physical adsorption and chemical adsorption: Fluid-fluid reactions different regimes, identification reaction regime, application to design. Physical absorption with chemical reaction, simultaneous absorption of two reacting cases consecutive reversible reactions between gas and liquid, irreversible reactions, estimation of effective interfacial area in absorption equipment.

Reaction kinetics, accounting porous nature of catalyst: Heterogeneous catalytic reactions - effectiveness factor, internal and external transport processes, non-isothermal reacting systems, uniqueness and multiplicity of steady states, stability analysis.

Modeling of chemical reactors: Modeling of multiphase reactors - Fixed, fluidized, trickle bed, and slurry reactors.

REFERENCE BOOKS

6. *G.F. Froment, K.B. Bischoff, Chemical Reactor Analysis and Design, 2nd ed., John Wiley, New York, 1990.*

COURSE OUTCOME

Upon completing the course, the student will be able to

CO1	have awareness on catalyst physical properties and catalyst characterization.
CO2	acquire awareness on kinetics of catalytic reaction and reactor design.
CO3	familiarize kinetics of non-catalytic reaction and reactor design
CO4	familiarize with operation and troubleshooting of heterogeneous reactors.

Course Code	:	CLOE11
Course Title	:	ENVIRONMENTAL ENGINEERING
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	OE

COURSE LEARNING OBJECTIVES

1. To impart the basic concepts of environmental engineering
2. To understand the problems of pollution and its treatment methodology.
3. To understand the control methodologies of pollutants and uses Environmental Impact Assessment (EIA)

COURSE CONTENT

Environment, Environmental quality and degradation, Industrial scenario in India. Sources and classification of Air Pollutants, Air quality standards – Meteorology and Air Pollution: Atmospheric stability and inversions-mixing height-plume rise estimation – effluent dispersion theories effects of air pollution on the environment, on materials, on human health, on animals. Measurements of air pollution, Equipments for control of air pollution.

Sources and types of industrial wastewater – Nature and Origin of Pollutants - Industrial wastewater and environmental impacts. Regulatory requirements for treatment of industrial wastewater. Industrial Wastewater Treatment methods: Equalization - Neutralization – Oil separation – Flotation – Precipitation, Aerobic and anaerobic biological treatment, Chemical oxidation – Ozonation – carbon adsorption -Photo catalysis, Ion Exchange – Membrane Technologies

Solid Waste Management: Type of waste collection systems, analysis of collection system – alternative techniques for collection system. Separation and Processing and Transformation of Solid Waste: unit operations user for separation and processing, Landfills: Site selection, design and operation, drainage and leachate collection systems – e waste - sources, collection, treatment and reuse management. Hazardous waste treatment technologies

Sources of noise pollution. Noise pollution standards and measurements - controlling methods of noise pollution. Effects on human being.

Historical development of Environmental Impact Assessment (EIA). EIA in Project Cycle. Legal and Regulatory aspects in India. – Types and limitations of EIA – Cross sectoral issues and terms of reference in EIA – Public Participation in EIA. EIA process- screening – scoping - setting – analysis – mitigation, Software packages for EIA – Expert systems in EIA. Prediction tools for EIA – Mathematical modeling for impact prediction

REFERENCE BOOKS

COURSE OUTCOMES

On completion of the course, the student can

CO1	understand the sources and effects of pollutants to the environment
CO2	understand the various treatment technologies for wastewater, air effluents, solid waste, noise pollution released from Process industries
CO3	understand the development and applications of various unit operation to control the toxic elements
CO4	understand the Limitation and Importance of Environmental Impact Assessment (EIA)

COURSE LEARNING OBJECTIVES

1. To understand the concepts and origin of the different optimization methods.
2. To get a broad picture of the various applications of optimization methods
3. Optimize the different methods in industry for design and production of products, both economically and efficiently.

COURSE CONTENT:

Linear algebra and matrices, Introduction to optimization, Classification of optimization problems, Linear Programming, Simplex method, Transportation Problems

Unconstrained Minimization: One dimensional search methods: Exhaustive search method, Fibonacci method etc., Gradient Based Methods: Newtons method, Secant method etc., Conjugate direction and quasi-Newton methods

Constrained Optimization: Lagrange theorem, FONC, SONC, and SOSC conditions

Non-linear problems: Non-linear constrained optimization models, KKT conditions, Projection methods

REFERENCE BOOKS:

1. *T.F. Edgar and D.M. Himmelblau, " Optimization Techniques for Chemical Engineers", McGraw-Hill, New York, 1985.*
2. *S.S.Rao, "Engineering Optimization Theory and Practice", Third edition, New Age International Publishers, India.*
3. *K. Deb, "Optimization Techniques", Wiley Eastern, 1995.*

COURSE OUTCOMES

After completion of course, the students can

CO1	apply the knowledge of different optimization methods for an optimum design.
CO2	acquire sufficient knowledge in this subject related to applications, where optimal decisions need to be taken in the presence of trade-offs between two or more conflicting objectives
CO3	implement the theory and applications of optimization techniques in a comprehensive manner for solving linear and non-linear, constrained and unconstrained programming techniques.
CO4	identify, formulate and solve a practical engineering problem of their interest by applying or modifying an optimization technique.

Course Code	:	CLOE13
Course Title	:	ENERGY ENGINEERING
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	OE

COURSE LEARNING OBJECTIVES

1. To identify different types of fuel sources for energy production.
2. To appreciate the advantages of energy production from renewable energy resources.

COURSE CONTENT:

Coal - Coal and Coal derived fuels; Characteristics, production methods and uses. Coal combustion technology, waste heat recovery.

Oil and Gases- Fuels from oil and gases: Characteristics, production methods and uses. Technology for combustion of fuels derived from oil and gas.

Renewable Energy - Solar energy utilization, Thermal application and photovoltaic applications; Wind, geothermal and hydro energy utilization; Nuclear Energy, Nuclear fission fuels processing, Nuclear reactions and nuclear reactors.

Bio Energy, Biomass conversion for fuels, characteristics and uses; production methods based on thermochemical and bioconversion, design of digesters.

Cogeneration: cogeneration alternatives, Gas turbine cogeneration, Steam turbine cogeneration, Diesel engine, utility cogeneration

REFERENCE BOOKS

1. G.D. Rai, "Non-conventional energy sources," Khanna Publishers, New Delhi, 2011.
2. Samir Sarkar, "Fuels and Combustion", 3rd Edn, University press Publication, 2008.

4. O.P. Gupta, "Fundamentals of Nuclear power reactors", Khanna Publishers, New Delhi, 1983.

COURSE OUTCOMES

On completion of the course, the students can

CO1	familiar with energy production from conventional fuels and renewable energy resources.
CO2	familiar with energy conservation through waste heat recovery.
CO3	familiar with the challenges associated with the use of various energy sources.
CO4	familiar with information on renewable energy technologies as a basis for further analysis and evaluation.

Course Title	:	PROCESS INSTRUMENTATION
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	OE

COURSE LEARNING OBJECTIVES

To understand the measurement techniques for the process variables such as temperature, Pressure, flow, level, composition etc.

COURSE CONTENT

Characteristics of Measurement System -Elements of instruments, static and dynamic characteristics, basic concepts and qualities of measurement, basic concepts of response of first order type instruments, mercury in glass thermometer

Pressure measurement: Pressure, Methods of pressure measurement, Manometers, Elastic pressure transducers, Measurement of vacuum, Force-balance pressure gauges, Electrical pressure transducers, Pressure switches, Calibration of pressure measuring instruments, Maintenance and repair of pressure measuring instruments, Troubleshooting

Temperature measurement: Temperature, Temperature scales, Methods of temperature measurement, Expansion temperature, Filled-system thermometers, Electrical temperature instruments. Pyrometers: Radiation and optical

Flow Measurement: Methods of flow measurement, Inferential flow measurement, Quantity flowmeters, Mass flowmeters, Calibration of flowmeters, Selection of flowmeters.

Level measurement: Methods of liquid level measurement, Direct methods, level measurement in pressure vessels, measurement of interface level, level of dry materials. Instruments for Analysis - recording instruments, indicating and signaling instruments, instrumentation diagram.

Methods of composition analysis: Spectroscopic analysis, Absorption spectroscopy, Emission spectroscopy, Mass spectroscopy, chromatography

COURSE OUTCOMES

On completion of the course, the student can

CO1	analyze repeatability, precision and accuracy of the instruments
CO2	understand the measurement techniques for pressure
CO3	understand the measurement techniques for temperature
CO4	understand the measurement techniques for flow and Level
CO5	understand the measurement techniques for composition

Course Code	:	CLOE15
Course Title	:	NANO TECHNOLOGY
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	OE

COURSE LEARNING OBJECTIVES

1. To impart the basic concepts of nanomaterials and nanotechnology
2. To understand the synthesis and applications of nanomaterials.

COURSE CONTENT

Overview of nanoscience: Nanorevolution, Properties at nanoscale. Theory, definitions and scaling. Supramolecular Chemistry, Definition and examples of the main intermolecular forces used in supramolecular chemistry. Self-assembly processes in organic systems.

Nanomaterials: Metal and Semiconductor Nanomaterials, Quantum Dots, Wells and Wires, Molecule to bulk transitions, Bucky balls and Carbon Nanotubes.

Methods of synthesis of Nanomaterials: Equipment and processes needed to fabricate nanodevices and structures such as bio-chips, power devices, and opto-electronic structures. Bottom-up (building from molecular level) and top-down (breakdown of microcrystalline materials) approaches.

Instrumentation for Nanoscale Characterization: Instrumentation required for characterization of properties on the nanometer scale. The measurable properties and resolution limits of each technique, with an emphasis on measurements in the nanometer range.

Applications: Solar energy conversion and catalysis, Molecular electronics and printed electronics Nanoelectronics, Polymers with a special architecture, Liquid crystalline systems, Linear and nonlinear optical and electrooptical. Advanced organic materials for data storage, Photonics, Plasmonics, Chemical and biosensors, Nanomedicine and Nanobiotechnology.

REFERENCE BOOKS:

1. *Jonathan Steed and Jerry Atwood, Supramolecular Chemistry.*

6. Nanobiotechnology; ed. C.M.Niemeyer, C.A. Mirkin. Springer Hand book of Nanotechnology, ed. Bharat Bhushan.

COURSE OUTCOMES

On completion of the course, the student can

CO1	understand the chemistry involved in the synthesis of nanomaterials.
CO2	identify and understand the peculiar properties of materials at nanoscale.
CO3	differentiate various synthesis techniques of nanomaterials for different applications.
CO4	analyze the properties and identify the instrumentation for characterization of nanomaterials.
CO5	find the importance of applications of nanomaterials in biological processes.

Course Code	:	CLOE16
Course Title	:	BIOENERGY
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	OE

COURSE LEARNING OBJECTIVES

Gain a comprehensive understanding of the principle of generation of energy from biomass.

COURSE CONTENT

Biomass characteristics & preparation: Biomass sources and classification. Chemical composition and properties of biomass. Energy plantations. Size reduction, Briquetting of loose biomass, Drying, Storage and handling of biomass.

Biogas technology: Feedstock for producing biogas. Aqueous wastes containing biodegradable organic matter, animal residues sugar rich materials. Microbial and biochemical aspects and operating parameters for biogas production, Kinetics and mechanism. Dry and wet fermentation, Digestors for rural application-High rate digesters for industrial waste water treatment.

Pyrolysis and thermo-chemical conversion: Thermo-chemical conversion of ligno-cellulose biomass. Incineration for safe disposal of hazardous waste, Biomass processing for liquid fuel production, Pyrolysis of biomass-pyrolysis regime, effect of particle size, temperature, and products obtained.

Gasification of biomass: Thermochemical principles: Effect of pressure, temperature and of introducing steam and oxygen. Design and operation of Fixed and Fluidised Bed Gasifiers, Safety aspects.

Combustion of biomass and cogeneration systems: Combustion of woody biomass-theory, calculations and design of equipment, Cogeneration in biomass processing industries. Case studies: Combustion of rice husk, Use of bagasse for cogeneration.

COURSE OUTCOMES

On completion of the course, the students will be familiar with

CO1	understanding of availability of biomass feedstocks and their potential attributes to biofuels production.
CO2	evaluation of methodologies for biomass preparation.
CO3	concepts of the second and third generation of bioenergy, and the conversion processes of biomass feedstock to biofuels.

Course Code	:	CLOE17
Course Title	:	DESIGN AND ANALYSIS OF EXPERIMENTS
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	OE

COURSE LEARNING OBJECTIVES

1. Describe how to design experiments, carry them out, and analyze the data they yield.
2. Investigate the logic of hypothesis testing, including analysis of variance and the detailed analysis of experimental data.
3. Understand the process of designing an experiment including factorial and fractional factorial designs.
4. Learn the technique of regression analysis, and how it compares and contrasts with other techniques studied in the course.
5. Understand the role of response surface methodology and its basic underpinnings.

COURSE CONTENT

Introduction to probability, Guidelines for experimental design, simple comparative experiments: Hypothesis testing, Experiments of a single factor, ANOVA

Randomized blocks, Latin squares, Introduction to factorial design, 2^k Factorial design, Blocking and confounding in 2^k Factorial design, Two level fractional factorial design, Development of regression model by 2^k Factorial design

Three level Factorial design and fractional factorial design, Blocking and confounding in three level design, Development of regression model by 3^k Factorial design

Fitting regression methods, Least square method, Simple linear regression, multiple linear regression, Polynomial regression

Introduction to optimization, Response surfaces, Method of steepest ascent, EVOP

REFERENCE BOOKS

2. Zivorad R. Lazic, *Design of Experiments in Chemical Engineering: A Practical Guide*, Jhon Wiley & Sons Inc.
3. Robert L. Mason, Richard F. Gunst, James L. Hess, *Statistical Design and Analysis of Experiments: With Applications to Engineering and Science*, Jhon Wiley & Sons Inc. 2nd ed.

COURSE OUTCOMES

On completion of the course, the student can

CO1	Plan experiments and testing the hypothesis
CO2	apply factorial design and fractional factorial design
CO3	develop the regression models from the experimental data
CO4	find the optimum solution

Course Code	:	CLOE18
Course Title	:	Introduction to Data Analysis
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	OE

COURSE LEARNING OBJECTIVES

The course will introduce students to the fundamental mathematical concepts required for a program in data science

Course content:

Descriptive statistics and data visualization: quantities frequently used to describe data (mean, median, mode, range, variance), Chebyshev's inequalities, correlation, data visualization tools/techniques such scatter plots, stem and leaf plots, histograms, quantiles, pie charts, use of dynamically changing plots to visualize evolving data;

Random variables and expectations: discrete and continuous random variables, probability density/mass function, cumulative distribution function, conditional probability, Bayes rule, joint density, marginal density, expectation, moments, moment generating functions, special discrete random variables (bernoulli, binomial, geometric, negative binomial, poisson), special continuous random variables (exponential, gaussian, chi-squared, t, F);

Distribution of Sampling Statistics: sample mean and its distribution, sample variance and its distribution, central limit theorem;

Parameter Estimation and Confidence Intervals: maximum likelihood estimation, properties of estimators, concept of estimators as random variables, concept of confidence intervals for parameters based on estimators, confidence intervals on mean and variance of normal distribution for various cases, confidence intervals on difference of means of normal distributions, confidence interval on success probability p in a binomial distribution;

Hypothesis testing: hypothesis testing framework, type I and type II errors, effect of sample size on these errors, p -value, hypothesis testing for mean of normal distribution for some commonly encountered situations, hypothesis testing for variance of normal distribution, hypothesis testing for equality of means and variances of data coming from two normal distributions, paired t -tests, hypothesis testing on success probability p in a binomial distribution

2. *Sheldon M. Ross, Introduction to Probability and Statistics for Engineers and Scientists, Elsevier, 4thEdition*

COURSE OUTCOMES:

After completion of the course, the students will be able to

CO1	gain knowledge on statistics and density functions
CO2	determine mean and variance
CO3	test hypothesis for the problems

Course Code	:	CLOE19
Course Title	:	Soft-computing Techniques
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	OE

COURSE LEARNING OBJECTIVES:

The primary objective of this course is to provide an introduction to the basic principles, techniques, and applications of soft computing.

COURSE CONTENT:

Introduction of soft computing, various types of soft computing techniques, Introduction to Neural Networks:

Artificial Neural Networks: Basic properties of Neurons, Neuron Models, activation functions, single layer and multilayer Feedforward networks. McCullochPitts neuron model-perceptron model-, learning methods, Computational complexity of ANNs. Case study

Imprecision, Ambiguity, Uncertainty, Fuzziness and certainty, Fuzzy sets and crisp sets. Fuzzy Properties, Mathematical operations on fuzzy sets, Fuzzy Inference system, fuzzification, rules, defuzzification, different methods of defuzzification Case study

Introduction to artificial neuro fuzzy inference system

.
Basic concept of Genetic algorithm and detail algorithmic steps-GA Application to optimization problems.

REFERENCE BOOKS:

2. *S.N.Sivanandam,S.N.Deepa, Principles of Soft Computing, John Wiley & Sons, 2007.*

COURSE OUTCOMES:

Upon successful completion of the course,

CO1	students will have an understanding of the basic areas of Soft Computing including Artificial Neural Networks, Fuzzy Logic and Genetic Algorithms.
CO2	Provide the mathematical background for carrying out the optimization associated with neural network learning

Mapping of Course outcomes with Programme outcomes

Course Code	:	CLMI 11
Course Title	:	CHEMICAL PROCESS CALCULATIONS
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	MR

COURSE LEARNING OBJECTIVES

1. To give students fundamental knowledge on Unit processes and Unit operations, Units and conversions and also the basic laws governing chemical operations.
2. To impart knowledgeable on material and energy balance with and without reactions

COURSE CONTENT

Basics of Unit operations and Unit processes. Units and Dimensions.

Stoichiometric principles –composition relations, density and specific gravity. Behaviour of Ideal gases - application of ideal gas law - gaseous mixtures - volume changes with change in composition.

Vapour pressure - effect of Temperature on vapour pressure - vapour pressure plots - vapour pressure of immiscible liquids - solutions. Humidity and Solubility: Humidity - saturation - vaporization - wet and dry bulb thermometry.

Material Balance - Processes involving chemical reaction - Combustion of coal, fuel gases and sulphur - Recycling operations - bypassing streams - Degree of conversion – excess reactant - limiting reactant. Unsteady state problems

Energy Balance: Thermo chemistry - Hess's law of summation - heat of formation, reaction, combustion and mixing - mean specific heat - Theoretical flame Temperature.

REFERENCE BOOKS

3. *B. I. Bhatt, "Stoichiometry", 5th Edn., Tata McGraw Hill Publishers Ltd., New Delhi, 2010.*
4. *Himmelblau, "Basic Principles and Calculations in Chemical Engineering", 8th Edn.,*

Prentice Hall of India Ltd, India 2012.

COURSE OUTCOMES

On completion of the course, the students will have

CO1	the capability to understand the need for study of unit operations and processes. Convert units and dimensions and also modify equations from system to another.
CO2	the capability to apply the laws of physics and chemistry in solving process industry related applications.
CO3	proficiency to integrate the data and formulate the mass and energy balance problems.
CO4	the capability to use mathematical knowledge for solving mass and energy balance problems with and without chemical reactions.

Course Code	:	CLMI 12
Course Title	:	TRANSFER OPERATIONS - I
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	MR

COURSE LEARNING OBJECTIVES

1. To impart the fundamental concepts of fluid statics, pressure distribution and dimensional analysis
2. To enable students to compute velocity profile, friction factor and head loss in pipes and fittings
3. To impart the knowledge of metering and transportation of fluids and fluid moving machinery performance
4. To understand basic principles of particle preparation, their characterization and equipments

COURSE CONTENT

Properties of fluids and concept of pressure: Introduction - Nature of fluids - physical properties of fluids - types of fluids. Fluid statics: Pressure - density - height relationships. Pressure Measurement. Units and Dimensions - Dimensional analysis

Momentum Balance and their Applications: Kinematics of fluid flow: Stream line -stream tube - velocity potential. Newtonian and non-Newtonian fluids - Time dependent fluids - Reynolds number - experiment and significance - Bernoulli's equation - Correction for fluid friction - Correction for pump work.

Flow of Incompressible Fluids Through Ducts: Flow of incompressible fluids in pipes - laminar and turbulent flow through closed conduits - velocity profile & friction factor for smooth and rough pipes - Head loss due to friction in pipes, fitting etc. Transportation and Metering: Measurement of fluid flow: Orifice meter, venturi meter, pitot tube, rotameter

Characteristics of Particulate Material: Properties and characterisation of particulate solids, analysis and technical methods for size and surface area distribution of powder; Flow properties of particulates. Introduction to size reduction equipment, energy and power requirement in milling operations.

REFERENCE BOOKS

2. *M. Coulson and J.F. Richardson, "Chemical Engineering", Vol. II, 5th Edn., Butterworth - Heinemann, 2002.*

COURSE OUTCOMES

On completion of the course, the student can

CO1	understand the fundamental concepts in fluids statics and to use dimensional analysis for scaling experimental results
CO2	analyze frictional flow in pipes and piping networks and to compute the head loss and power requirements for chemical process equipments
CO3	select the metering equipments and fluid moving machinery for an appropriate chemical engineering operations
CO4	understand the basic principles of particles preparation and their characterization
CO5	have knowledge on different size reducing equipment and power requirements during size reduction

Course Code	:	CLMI 13
Course Title	:	TRANSFER OPERATIONS – II
Number of Credits	:	3
Prerequisites	:	CLMR12
Course Type	:	MR

COURSE LEARNING OBJECTIVES

1. To impart the basic concepts of transfer operations.
2. To understand the transfer operations and equipments in process industries.

COURSE CONTENT

Principles of Mass transfer: Fick's law of diffusion, unsteady state diffusion, Convective mass transfer, Inter phase mass transfer and mass transfer coefficients, Mass transfer theories. Equilibrium stages and transfer units, Equipments-Plate and Packed columns, stage efficiency.

Unit Processes in Mass Transfer: Principle and theory of Gas absorption, Distillation- Types of distillation, continuous fractionation, Liquid-Liquid extraction, Leaching, Adsorption.

Basic concepts of heat Transfer: Heat conduction, types and governing equation, natural and forced convection heat transfer coefficient, thermal boundary layer, laws of thermal radiation, shape factor, radiation shield, green house effect. Types of heat exchangers, charts, performance analysis of heat exchangers.

Simultaneous Heat and Mass Transfer : Humidification- cooling towers, Drying, Crystallization- Super saturation theory, crystallizers, evaporators and condensers.

Course Code	:	CLMI 14
Course Title	:	CHEMICAL REACTION ENGINEERING
Number of Credits	:	3
Prerequisites	:	CLMR11,CLMR13
Course Type	:	MR

COURSE OBJECTIVES

To impart knowledge on reactors for chemical processes and kinetics

COURSE CONTENT

Basics of Kinetics: Introduction - kinetics of homogeneous reactions: Concentration dependent & Temperature dependent term of rate equation, Searching for a mechanism. Interpretation of Batch Reactor data

Reactor Design: Introduction to Reactor Design. Single Ideal Reactors.

Design of Reactor for Multiple Reaction: Design for single and multiple Reactions. Size comparison of single reactors for single reactions. Multiple Reactor system for single reactions. Reactions in parallel, reactions in series and series - parallel reactions of first order. Recycle reactor, auto catalytic reactions.

Flow Behaviour of Reactors: Non - ideal flow: Residence time distribution studies: C, E, F and I curves, conversion calculations directly from tracer studies. Models for non-ideal flow - dispersion and tanks in series multi-parameter models. Heat Effects: Temperature and pressure effects on reaction,

4. *Fogler.H.S., "Elements of Chemical Reaction Engineering", Prentice Hall of India Ltd., IIIrd Edition, 2000*

COURSE OUTCOMES

On completion of the course, the student can

CO1	understand the calculation of heat capacities and heat effects accompanying chemical reactions
CO2	gain the knowledge on equilibrium states for mixture of gases, phases and chemical reaction.
CO3	understand the fundamentals of chemical kinetics, reaction mechanism and factors affecting reaction
CO4	have knowledge on ideal reactor design and reactor combination and reactor trouble shooting.

Course Code	:	CLMI 15
Course Title	:	CHEMICAL TECHNOLOGY
Number of Credits	:	3
Prerequisites	:	NONE
Course Type	:	MR

COURSE LEARNING OBJECTIVES

1. To impart the basic concepts of chemical technology.
2. To develop understanding about unit process and unit operations in various industries.
3. To learn manufacturing processes of organic and Inorganic Chemicals and its applications.

COURSE CONTENT

Natural Products Processing: Production of pulp, paper and rayon, Manufacture of sugar

Petroleum and Petrochemicals: Characteristics, Fuels/chemicals from petroleum and petrochemicals, Primary and Secondary processing, Treatment techniques and applications. Building blocks of the petrochemicals.

Alkalies and Acids: Chlor - alkali Industries: Manufacture of Soda ash, Manufacture of caustic soda and chlorine - common salt. Sulphur and Sulphuric acid: Mining of sulphur and manufacture of sulphuric acid. Manufacture of hydrochloric acid.

Cement Gases, Water and Paints: Types and Manufacture of Portland cement, Glass:
Industrial Gases: Carbon dioxide, Nitrogen, Hydrogen, Oxygen and Acetylene - Manufacture of paints – Pigments

Fertilisers: Nitrogen Fertilisers; Synthetic ammonia, nitric acid, Urea, Phosphorous Fertilisers: Phosphate rock, phosphoric acid, super phosphate and Triple Super phosphate

Course Code	:	CLHO11
Course Title	:	ADVANCED PROCESS CONTROL
Number of Credits	:	3
Prerequisites	:	CLPC24
Course Type	:	HONORS

COURSE LEARNING OBJECTIVES

Expose students to the advanced control methods used in industries and research. This course prepares the student to take up such challenges in his profession.

COURSE CONTENT

Review of Systems: Review of first and higher order systems, closed and open loop response. Response to step, impulse and sinusoidal disturbances. Transient response. Block diagrams.

Stability Analysis: Frequency response, design of control system, controller tuning and process identification. Zeigler-Nichols and Cohen-Coon tuning methods, Bode and Nyquist stability criterion. Process identification.

Special Control Techniques: Advanced control techniques, cascade, ratio, feed forward, adaptive control, Smith predictor, internal model control, model predictive control.

Multivariable Control Analysis: Introduction to state-space methods, Control degrees of freedom analysis, Interaction, Bristol arrays, Niederlinski index, design of controllers, Tuning of multivariable controllers.

Sample Data Controllers: Basic review of Z transforms, Response of discrete systems to various inputs. Open and closed loop response to step, impulse and sinusoidal inputs, closed loop response of discrete systems. Design of digital controllers. Introduction to PLC and DCS.

5. *S. Bhanot, 'Process Control: Principles and Applications', Oxford University Press, 2008.*

COURSE OUTCOMES

On completion of the course, the student can

CO1	analyze the transient response of a system and perform system identification
CO2	apply the knowledge of stability and perform controller design and tuning
CO3	design various advanced control algorithms for chemical processes having specific problems
CO4	analyze multivariable control systems and tuning of multivariable controllers
CO5	understand the sampled data systems and design of digital controllers

Course Code	: CLHO12
Course Title	: PINCH ANALYSIS AND HEAT EXCHANGE NETWORK DESIGN
Number of Credits	: 3
Prerequisites	: CLPC14, CLPC16
Course Type	: HONORS

COURSE LEARNING OBJECTIVES

1. Understanding on Pinch concept, and application to Process Heat Exchange Networking.
2. Identification of Energy Minimization in the Process
3. Retrofitting Concepts and Setting up Targets for Energy Minimization

COURSE CONTENT

Thermodynamical review of the process, Pinch Concept, significance of pinch, pinch in grid representation, Threshold problems, capital cost implication of the pinch.

Targeting: Heat exchanger networks, energy targeting, area targeting, unit targeting, shell targeting, cost targeting, super targeting, continuous targeting.

Pinch Methodology: Problem representation, temperature enthalpy diagram, simple match matrix. Heat content diagram, Temperature interval diagram.

Pinch Design and Optimization: Networks for maximum energy recovery, Pinch design method, Flexibility criteria of the pinch, cp table, the tick of heuristic, case studies, optimization of heat exchanger network optimality for a minimum area network, Sensitivity analysis.

Energy and Resource Analysis of various processes, Batch process, flexible process, distillation process, evaporation process, reaction process, process using mass separating agent. Heat pipes and Heat pumps,

4. James M. Douglas "Conceptual Design of Chemical Process", McGraw Hill, New York, 1988.

Course Outcomes:

On completion of the course, the student can

CO1	understand the concept of the Pinch analysis and appreciate the pinch analysis concept and process thermodynamics.
CO2	identify the minimum energy targets, different choices and constraint during heat exchange networking.
CO3	represent the pinch Methodology using different presentations.
CO4	design and Optimization of HENS
CO5	form strategies for retrofitting existing process plant, integration of energy demands of multiple processes.

Course Code	:	CLHO13
Course Title	:	APPLIED MATHEMATICS IN CHEMICAL
Number of Credits	:	3
Prerequisites	:	CLPC16, CLPC18, CLPC21
Course Type	:	HONORS

COURSE LEARNING OBJECTIVES

1. Describe chemical engineering processes in mathematical form by employing the appropriate microscopic and macroscopic balances
2. Identify if an analytical solution to the differential equations is possible
3. Derive and interpret physically the solution to differential equations amenable to analytical solution

COURSE CONTENTS

Design of engineering experiments: Treatment of experimental data and interpretation of results. Experiments with a single factor: the analysis of variance. Factorial designs. Curve fitting methods, Interpolation and extrapolation.

Formulation of physical problems: Mathematical modelling of chemical engineering processes based on the first principles.

Analytical solutions of equations: Separable forms, homogeneous equations, exact solutions, singular solutions.

Numerical solution of non-linear equations: Linearization of nonlinear equations. Numerical solution of ordinary differential equations: Initial value and boundary value problems. Stiff differential equations. Numerical solution of partial differential equations.

Optimization: Types of optimization problems, optimization of a function of single variable, unconstrained minimization, constrained minimization.

4. Mark E. Davis, "Numerical Methods and Modelling for Chemical Engineers", John Wiley & Sons, 1984.
5. S. K. Gupta, "Numerical Techniques for Engineers", Wiley Eastern Ltd., New York, 1995

COURSE OUTCOMES

On completion of the course, the student can

CO1	apply mathematical concepts and principles for perform the computations
CO2	create, use and analyze graphical representations of mathematical relationships.
CO3	apply mathematics to solve the chemical engineering problems.
CO4	develop mathematical representation for chemical process system

CO4	✓	✓	✓		✓			✓			✓	✓

Course Code	:	CLHO14
Course Title	:	ADVANCES IN HEAT TRANSFER
Number of Credits	:	3
Prerequisites	:	CLPC16, CLPC13
Course Type	:	HONORS

COURSE LEARNING OBJECTIVES

1. Understanding on the concept of thermal conduction; should be able to get analytical solutions for 2D/3D steady heat conduction problems by using variable separation method.
2. Understanding of the heat conduction with phase change, and knowing how to solve it.
3. Application of governing equations for convection heat transfer; and ~~knowing the~~ dimensionless parameters
4. Analyzing the external and internal laminar flow heat transfer using boundary layer concept
5. Understanding of the boiling and condensation mechanism; Thermal performance analysis for a heat pipe.

COURSE CONTENT

Heat conduction, transient and steady state heat conduction. Convective heat transfer, -conservation equations, boundary layer approximations. Forced convective laminar and turbulent flow solutions. Natural convection solutions, correlations.

Radiation heat transfer, estimation of view factors and emissivity factors for different situation. Combined conduction, convection and radiation heat transfer and its applications

Heat Transfer with phase change: condensation – mechanism, controlling parameters. Nusselt Theory; solution to laminar film modifications, influence of other parameters, correlations for single horizontal tube, vertical bank of horizontal tubes, other configurations. Dropwise condensation. Boiling mechanisms regimes. Selection and design of equipment with phase transformation

Advances in heat exchanger design and compact heat exchangers, Heat transfer in liquid metals. Heat transfer in packed and fluidised beds.

4. A.Bejan Convective Heat Transfer, Fourth Edition, John Wiley and Sons, 2013.

COURSE OUTCOMES

On completion of the course, the student can

CO1	solve the 2-D transient heat conduction problems by using variable separation method.
CO2	understand and solve conduction, convection and radiation problems
CO3	design and analyze reactor heating and cooling systems.
CO4	design and analyze the performance of heat exchangers and evaporators.

Course Code	:	CLHO15
Course Title	:	COMPUTATIONAL FLUID DYNAMICS
Number of Credits	:	3
Prerequisites	:	CLPC13
Course Type	:	HONORS

COURSE OBJECTIVES:

To understand the theory of governing equations representing fluid flow behavior

To solve fluid flow problems involving diffusion and convection phenomena using Finite volume method

COURSE CONTENT:

Governing equations of fluid flow and heat transfer, Equations of state, Navier-Stokes equations for a Newtonian fluid, Classification of physical behaviour, Classification of fluid flow equations, Auxiliary conditions for viscous fluid flow equations

Transition from laminar to turbulent flow, Effect of turbulence on time-averaged Navier-Stokes equations, Characteristics of simple turbulent flows, Free turbulent flows, Flat plate boundary layer and pipe flow, Turbulence models, Mixing length model, The k-e model, Reynolds stress equation models, Algebraic stress equation models

Introduction, one-dimensional steady state diffusion, two-dimensional diffusion problems, three-dimensional diffusion problems, discretised equations for diffusion problems

Steady one-dimensional convection and diffusion, The central differencing scheme, Properties of discretisation schemes-Conservativeness, Boundedness, Transportiveness, Assessment of the central differencing scheme for convection-diffusion problems, The upwind differencing scheme, The hybrid differencing scheme, The power-law scheme, Higher order differencing schemes for convection-diffusion, Quadratic upwind differencing scheme

One-dimensional unsteady heat conduction, Discretisation of transient convection-diffusion equation, Solution procedures for unsteady flow calculations, Implementation of Inlet, outlet and wall boundary conditions, constant pressure boundary condition.

3. *Vivek V. Ranade, Computational flow modeling for chemical reactor engineering Academic Press, San Diego, 2002*

COURSE OUTCOMES

Upon completion, the students can

CO1	impart knowledge on theory of governing equations representing fluid flow behavior
CO2	understand the concept of turbulence and its modeling
CO3	solve steady state diffusion and convection fluid flow problems using Finite volume method
CO4	solve unsteady state fluid flow problems using finite volume method

Course Code	:	CLHO16
Course Title	:	Process Safety Management
Number of Credits	:	3
Prerequisites	:	CLPE15
Course Type	:	HONORS

COURSE LEARNING OBJECTIVES

1. To inculcate the importance of process safety practices.
2. To imbibe an extensive knowledge on the management of safety
3. To provide technical inputs pertaining to safety.

COURSE CONTENT:

Introduction: Industrial processes and hazards potential, mechanical electrical, thermal and process hazards. Safety and hazards regulations, Industrial hygiene. Factories Act, 1948 and Environment (Protection) Act, 1986 and rules thereof.

Fire and Explosion: Shock wave propagation, vapour cloud and boiling liquid expanding vapours explosion (VCE and BLEVE), mechanical and chemical explosion, multiphase reactions, transport effects and global rates. Preventive and protective management from fires and explosion - inerting, static electricity passivation, ventilation, and sprinkling, proofing, relief systems – relief valves, flares, scrubbers.

Hazards identification-toxicity, fire, static electricity, noise and dust concentration; Material safety data sheet, hazards indices- Dow and Mond indices, hazard operability (HAZOP) and hazard analysis (HAZAN).

Leaks and Leakages: Spill and leakage of liquids, vapors, gases and their mixture from storage tanks and equipment; Estimation of leakage/spill rate through hole, pipes and vessel burst; Isothermal and adiabatic flows of gases, spillage and leakage of flashing liquids, pool evaporation and boiling; Release of toxics and dispersion. Naturally buoyant and dense gas dispersion models; Effects of momentum and buoyancy; Mitigation measures for leaks and releases.

Case Studies: Flixborough, Bhopal, Texas, ONGC offshore, HPCL Vizag and Jaipur IOC oil-storage depot incident; Oil, natural gas, chlorine and ammonia storage and transportation hazards.

3. Tweeddale M., "Managing Risk and Reliability of Process Plant", Gulf Professional Publishing 2003

COURSE OUTCOMES

On completion of the course, the students can

CO1	identify the process hazards in chemical industries.
CO2	have knowledge on fire and explosion safety.
CO3	handle leaks and will have knowledge on its management.
CO4	have knowledge on real time incidents that are occurred in the past.
